

On ecosystems management, we urge UNEP and the Governments to respond to the demands that the Latin America and the Caribbean Civil Society Forum has repeatedly requested for over the years regarding the Initiative for Regional Integration of South America (IIRSA, in Spanish) and the Mesoamerica Integration and Development Project, carrying out in both cases the comprehensive analysis mentioned in Sub-Program 3 for large-scale infrastructure projects. Additionally, we request that these analysis are done in a participatory manner, with full involvement of all local stakeholders that will suffer environmental impacts as a result of these projects.
