Did you know?

In the Gulf countries, district cooling could provide 30 per cent of forecasted cooling needs by 2030, avoiding 20 gigawatts (GW) of new power capacity and 200,000 barrels of oil equivalent per day in fuel.

THE FUTURE IS PRICELESS: SWITCH TO MODERN DISTRICT ENERGY SYSTEMS
In DUBAI, United Arab Emirates, the state-owned company Empower is providing one million tonnes of cooling capacity using recycled water instead of freshwater, which meets 70 per cent of Dubai’s cooling needs and 40 per cent in the UAE.
