This publication has been peer-reviewed and the information herein is believed to be reliable, but the publisher does not warrant its completeness or accuracy. This particular report in the GIWA Regional assessments series has been edited by the UNEP Collaborating Centre on Water and Environment (UCC-Water).

Contents

Preface	9
Executive summary	10
Regional definition	12
Boundaries of the regions	12
Physical characteristics	12
Socio-economic characteristics	20
Conclusion	23
Assessment	24
Freshwater shortage	25
Pollution	25
Habitat and community modification	30
Unsustainable exploitation of fish and other living resources	33
Global change	36
Priority concerns	38
Causal chain analysis	40
Introduction	40
Immediate causes	40
Root causes	45
Conclusion	47
Policy options	49
Key issues and causes	49
Options for policy intervention	49
Conclusions	54

Annexes	62
Annex I List of contributing authors and organisations involved	62

List of figures

Figure 1	<i>Boundaries of the Arctic Greenland, East Greenland Shelf and West Greenland Shelf regions.</i>	13
Figure 2	<i>Greenland map showing a typical situation during the winter. The locations of the larger polynyas around Greenland are shown.</i>	15
Figure 3	<i>Ocean surface currents. Blue arrows indicate cold currents and red arrows show warm ones.</i>	15
Figure 4	<i>Gross primary production from July to August is greatest along edge of the ice off East Greenland and Labrador and near the coast where bottom water is brought to the surface by upwelling.</i>	16
Figure 5	<i>(a) Annual pelagic primary production versus length of productive open water period. b) Geographical location of investigations.</i>	17
Figure 6	<i>Catches of fish from region 16, West Greenland Shelf (upper figure) and region 15, East Greenland (lower figure).</i>	18
Figure 7	<i>National parks and protected areas indicated by their name.</i>	19
Figure 8	<i>Population pyramid for Greenland, 2001.</i>	20
Figure 9	<i>Mercury (left) and PCB (right) concentrations in human blood.</i>	30
Figure 10	<i>Polar bears live in ice-covered fjords and seas, their most important prey being ringed seals.</i>	31
Figure 11	<i>Walrus occur in coastal waters. They often rest on small, sturdy ice floes. Thus, these floes are part of their habitat.</i>	32
Figure 12	<i>Time series of the winter NAO index (a), winter air temperature (b), sea temperature (c), landings of Atlantic cod (d), and northern shrimp (e) in the West Greenland LME (16), 1950-2000.</i>	37
Figure 13	<i>Pathways for pollutants transported to Greenland.</i>	44
Figure 14	<i>Estimated cumulative global usage of PCBs (1930-2000). Most of the use was in the northern temperate region.</i>	44
Figure 15	<i>Causal chain analyses regarding overexploitation.</i>	48
Figure 16	<i>Causal chain analyses regarding chemical pollution.</i>	48

List of tables

Table 1	<i>Scoring tables for the Arctic Greenland, East Greenland and West Greenland regions.</i>	24
Table 2	<i>Heavy metals in the environment in Greenland.</i>	27
Table 3	<i>Persistent organic pollutants (POPs) in the environment in Greenland.</i>	27
Table 4	<i>Other contaminants of concern.</i>	28
Table 5	<i>Human health impacts of contaminants in Greenland.</i>	29
Table 6	<i>Reported number of individuals by part-time and full-time hunters, 1996-2000.</i>	34
Table 7	<i>Calculated number of belugas in the area Qeqertarsuaq og Maniitsoq, West Greenland. From aerial observations.</i>	34
Table 8	<i>Prioritisation of impacts of Major Concern at present and in 2020 in Arctic Ocean (1), East- and West Greenland Shelf (15 and 16).</i>	38
