

**Governing Council
of the United Nations
Environment Programme**

Distr.: General
3 December 2009

English only

**Eleventh special session of the Governing Council/
Global Ministerial Environment Forum**

Bali, Indonesia, 24–26 February 2009

Item 4 of the provisional agenda*

Emerging policy issues: environment in the multilateral system

Environmental law

Note by the Executive Director

Addendum

**Report of the intergovernmental meeting to review and further
develop draft guidelines for the development of domestic legislation
on liability, response action and compensation for damage caused by
activities dangerous to the environment**

Summary

By section III of its decision 25/11 of 20 February 2009, on the draft guidelines for the development of national legislation on liability, response action and compensation for damage caused by activities dangerous to the environment, the Governing Council took note of the draft guidelines and requested the secretariat to carry out further work on them with a view to their adoption by the Governing Council/Global Ministerial Environment Forum at its next special session.

The annex to the present note contains the report of the intergovernmental meeting organized in follow-up to section III of decision 25/11 to review and further develop the draft guidelines, held from 9 to 11 November 2009 at the headquarters of the United Nations Environment Programme in Nairobi, as set out in document UNEP/Env.Law/IGM.Lia/1/3, which is available also in French and Spanish.

The report of the intergovernmental meeting to review and further develop draft guidelines for the development of national legislation on access to information, public participation and access to justice in environmental matters is made available in document UNEP/GCSS.XI/INF/6. That the present note has been made available in an addendum to that document does not imply that the two notes and the associated sets of guidelines are substantially linked or that there is a difference in status between them. Both sets of guidelines are part of the UNEP environmental law programme under the environmental governance priority area.

* UNEP/GCSS.XI/1.

Annex

Report of the intergovernmental meeting to review and further develop draft guidelines for the development of domestic legislation on liability, response action and compensation for damage caused by activities dangerous to the environment

Introduction

1. The United Nations Environment Programme (UNEP) convened a consultative meeting of government officials and experts to review and further develop draft guidelines for the development of national legislation on liability and compensation for environmental damage at its headquarters in Nairobi on 18 and 19 June 2008. The outcomes of that meeting, as contained in document UNEP/Env.Law/CM/1/2, led to the adoption of Governing Council decision 25/11 III, which requested the secretariat to carry out further work on the guidelines with a view to their adoption by the Governing Council/Global Ministerial Environment Forum at its next special session. This further work resulted in additional consultations with Governments, experts and stakeholders and subsequently to the convening of the current meeting, from 9 to 11 November 2009, also at UNEP headquarters.

I. Opening of the meeting

2. The meeting was opened at 10.20 a.m. on Monday, 9 November 2009 by Ms. Elizabeth Maruma Mrema, Principal Legal Officer, Division of Environmental Law and Conventions, UNEP. In her remarks, she pointed out that the draft guidelines should serve as voluntary guidance to Governments in developing national legislation on liability and compensation for environmental damage. Other international liability regimes existed, such as under the Cartagena Protocol on Biosafety to the Convention on Biological Diversity, but the guidelines under consideration were intended to be global and to assist any country in developing liability and compensation legislation in a national context.

II. Organization of work

A. Election of officers

3. Ms. Rosa Vivien Ratnawati (Indonesia) was elected as chair of the meeting.

B. Adoption of the agenda

4. The following agenda was adopted based on document UNEP/Env.Law/IGM.Lia/1/1, as orally amended:

1. Opening of the meeting.
2. Election of officers.
3. Adoption of the agenda.
4. Briefing by the secretariat on the process of developing the draft guidelines.
5. Review and further development of the draft guidelines for the development of domestic legislation on liability, response action and compensation for damage caused by activities dangerous to the environment.
6. Discussion of action on the draft guidelines for the consideration of the Governing Council.
7. Other matters.
8. Closure of the meeting.

C. Attendance

5. The meeting was attended by experts representing the following Governments: Algeria, Angola, Argentina, Benin, Botswana, Brazil, Burundi, China, Democratic Republic of the Congo, Cuba, France, Germany, Ghana, Guatemala, Hungary, Indonesia, Italy, Japan, Kenya, Kuwait, Madagascar, Malawi, Malaysia, Mali, Mauritius, Mexico, Morocco, Mozambique, Nepal, Netherlands, Pakistan, Russian Federation, Saint Lucia, Samoa, Senegal, Serbia, Sierra Leone, Spain, Swaziland, Sweden, Thailand, Togo, Trinidad and Tobago, Turkey, Uganda, United Kingdom of Great Britain and Northern Ireland, United Republic of Tanzania, United States of America, Uzbekistan.
6. The representative of the Occupied Palestinian Territory also attended the meeting.
7. The representatives of the following United Nations entities and organizations were present: Food and Agriculture Organization of the United Nations, United Nations Environment Programme.
8. The following non-governmental organizations were present: Cohort for Research on Environment, Urban Management and Human Settlements, Institute for Law and Environmental Governance.

III. Briefing by the secretariat on the process of developing the draft guidelines

9. The representative of the secretariat presented an outline of the work undertaken by UNEP to develop the draft guidelines following the adoption by the Governing Council of decision 25/11 on the subject in February 2009. By that decision, the Governing Council had requested the secretariat to carry out further work on the guidelines with a view to their adoption at its forthcoming special session, in 2010. The Executive Director and the Director of the Division of Environmental Law and Conventions had written to Governments, members of the Committee of Permanent Representatives, civil society and other stakeholders to elicit further comments with a view to enhancing the guidelines' relevance. The secretariat had received communications from 16 Governments and the European Union and from eight organizations with a number of comments and suggestions. An expert meeting had taken place in Geneva in September 2009, during which participants had considered how to incorporate the additional comments received and maintain consistency in the document. The final draft document before representatives had been prepared by the secretariat with the help of Mr. Gunther Handl, a distinguished expert on the subject. In recent weeks, further consultations had taken place between UNEP representatives and countries in several regions. It was therefore felt that the process had been inclusive; further guidance on the guidelines from representatives at the current meeting would also be taken into account.
10. Another representative of the secretariat described the format of the latest version of the draft guidelines, as set out in document UNEP/Env.Law/IGM.Lia/2/2. The revised guidelines comprised three documents: the proposed 14 guidelines themselves; the commentary to the guidelines, intended to provide better understanding of the text of each guideline and not to be the subject of negotiation at the meeting; and two annexes, in response to a request to include a sample list of hazardous substances and a sample list of activities and installations dangerous to the environment, which were intended to be illustrative and were also not for negotiation. Since the draft guidelines had undergone a long process of preparation, the secretariat did not intend to present each guideline separately. She also noted that an information document (UNEP/Env.Law/IGM.Lia/1/INF.1), which contained comments received from Australia and Canada, had been made available to participants, as representatives from those countries had been unable to attend the current meeting.
11. In the ensuing discussion, a number of general comments were made. Several representatives expressed appreciation for the work of UNEP in revising the draft guidelines and said that the guidelines would be extremely helpful to countries in developing domestic legislation on the subject.
12. The representative of a regional economic integration organization said that European countries supported the adoption of the guidelines at the forthcoming special session of the Governing Council. He sought clarification of the process following the current meeting and asked until what stage further modifications to the document might be made. Another representative asked what timeline was envisaged for the subsequent steps.
13. The representative of the secretariat clarified that the guidelines, once finalized, would be annexed to the present report and distributed to Governments. The report would be discussed by the Committee of Permanent Representatives at its forthcoming meeting in December as part of

preparations for the Governing Council special session, and again at its meeting in January if necessary. In the event of comments from Governments, the guidelines would be revised as necessary and presented to the Governing Council.

14. The representative of a regional economic integration organization noted that directive 2004/35/CE of the European Parliament and of the Council of 21 April 2004 on environmental liability with regard to the prevention and remedying of environmental damage governed the position of European countries regarding environmental matters and defined their fields of competence.

15. One representative expressed the view that the work on the guidelines made good use of the comparative advantage of UNEP in contributing to the conservation and improvement of the global environment. His Government was hopeful that the guidelines would be adopted at the next session of the Governing Council based on the current discussions and that they would assist countries in developing their own legislation.

16. One representative requested all documents to be made available in French so that French-speaking countries could participate effectively in the meeting.

17. Another representative noted that there remained many gaps in environmental legislation, particularly in developing countries, and that the guidelines were highly appreciated. It was important also to evaluate implementation at the national level. Responding to the comment, the representative of the secretariat emphasized that the guidelines were what she termed “soft” laws and intended to serve as guidelines within the parameters of national legislation.

IV. Review and further development of the draft guidelines for the development of domestic legislation on liability, response action and compensation for damage caused by activities dangerous to the environment

18. The draft guidelines were reviewed and further developed in the course of the meeting. The text of some guidelines and commentaries were revised in the light of amendments proposed. The guidelines and commentaries thereto are set out in annex I to the present report. Issues included in response to specific requests for inclusion in the present report are set out below.

A. Guideline 6

19. During the discussion on the present guideline, a proposed additional paragraph, numbered 6bis, was inserted. As the text proposed was entirely new and had not been discussed among Governments prior to the meeting, several representatives expressed reticence at discussing it, given that it could have implications for domestic legislation in some countries, among other things. Given that it appeared not to be possible for representatives to reach consensus, notwithstanding the discussions on the matter during the meeting representatives agreed that a footnote reading “some Governments reserve the right to return to the text of the present guideline” would be inserted and that the proposed paragraph would be placed within square brackets.

B. Guideline 14

20. During the discussion on the present guideline, additional text was proposed. As that text was entirely new, having been inserted at the request of some Governments and unanimously recommended by experts, it had not been available for review prior to the meeting. Several representatives therefore expressed reticence at discussing it, pointing out that they would need to seek further guidance from their capitals before approving the text in question. They also noted that the related annexes would require further discussion. Given that no consensus could be reached, representatives agreed that a footnote reading “some Governments reserve the right to return to the text of the present guideline and the related annexes” would be inserted.

C. Guideline 14.3

21. During the discussion on the present guideline, various additional suggestions were proposed. It was not possible for representatives to reach agreement on the suggestions, which included deleting the wording “illustrative samples of which are provided for in annexes I and II to the commentary to the present guidelines”, replacing that wording with “to this end, domestic law might wish to adapt existing classification schemes of relevant international legal instruments or laws and regulations of specific

countries”, and including reference to the illustrative samples and to the Globally Harmonized System of Classification and Labelling of Chemicals in the commentary. Given that no consensus could be reached, representatives therefore agreed that the suggestions made would be recorded in the present report and that the original paragraph in the draft guidelines would be placed within square brackets.

V. Discussion of action on the draft guidelines for the consideration of the Governing Council

22. The representative of the secretariat presented a draft text on suggested action for consideration by the Governing Council set out in a conference room paper. Several representatives suggested that the draft decision should not be discussed during the current meeting as the guidelines to which it related had yet to be finalized. Others said that the guidelines and the draft decision should be discussed by the Committee of Permanent Representatives to UNEP rather than in the current forum.

23. The representative of the secretariat clarified that, even if the text under review were to be approved by representatives during the current meeting, it would nevertheless be submitted to the Committee for its review and onward transmission to the Governing Council as appropriate. She stressed that representatives in the current meeting, having reviewed the draft guidelines in detail, were in the best position to understand the intent of the draft decision.

24. A number of representatives said that any intergovernmental body was permitted to suggest action to the Governing Council through the Committee. Representatives therefore agreed that the document submitted to the Committee by representatives at the current meeting would comprise suggested action rather than a draft decision. In the ensuing discussion, various representatives proposed editorial and substantive changes to the draft decision. The final version of the decision is set out in annex III to the present report.

VI. Other matters

25. No other matters were discussed.

VII. Closure of the meeting

26. Following the customary exchange of courtesies, the meeting was declared closed at 5.25 p.m. on Wednesday, 11 November 2009.

Annex I

Draft revised guidelines for the development of domestic legislation on liability, response action and compensation for damage caused by activities dangerous to the environment¹

The purpose of the present guidelines is to highlight core issues that States will have to resolve should they choose to draft domestic laws and regulations on liability, response action and compensation for damage caused by activities dangerous to the environment. The guidelines discuss key elements for possible inclusion in any such domestic legislation and offer specific textual formulations for possible adoption by legislative drafters. It is envisaged that they will be of assistance to, in particular, developing countries and countries with economies in transition, in devising, as they deem appropriate, domestic legislation or policy on liability, response action and compensation.

Guideline 1: Objective

The objective of the present guidelines is to provide guidance to States regarding domestic rules on liability, response action and compensation for damage caused by activities dangerous to the environment, taking into account the polluter pays principle.

Guideline 2: Scope of application

1. The present guidelines apply to liability, response action and compensation for damage caused by activities dangerous to the environment.
2. They are not intended to apply to damage caused by activities dangerous to the environment that are covered by other domestic laws establishing special liability regimes or that principally relate to national defence, international security or natural disaster management.

Guideline 3: Definitions

1. The term “activity dangerous to the environment” means an activity or installation specifically defined under domestic law.
2. The term “damage” means:
 - (a) Loss of life or personal injury arising from environmental damage;
 - (b) Loss of or damage to property arising from environmental damage;
 - (c) Pure economic loss;
 - (d) Costs of reinstatement measures, limited to the costs of measures actually taken or to be undertaken;
 - (e) Costs of preventive measures, including any loss or damage caused by such measures;
 - (f) Environmental damage.
3. The term “environmental damage” means an adverse or negative effect on the environment that:
 - (a) Is measurable taking into account scientifically established baselines recognized by a public authority that take into account any other human-induced variation and natural variation;
 - (b) Is significant, which is to be determined on the basis of factors such as:
 - (i) Long-term or permanent change, to be understood as change that may not be redressed through natural recovery within a reasonable period of time;

¹ The present guidelines have been amended and revised on the basis of the discussions at the intergovernmental meeting to review and further develop draft guidelines for the development of domestic legislation on liability, response action and compensation for damage caused by activities dangerous to the environment, held in Nairobi from 9 to 11 November 2009.

- (ii) Extent of the qualitative or quantitative changes that adversely or negatively affect the environment;
- (iii) Reduction or loss of the ability of the environment to provide goods and services, either of a permanent nature or on a temporary basis;
- (iv) Extent of any adverse or negative effect or impact on human health;
- (v) Aesthetic, scientific and recreational value of parks, wilderness areas and other lands.

4. The term “operator” means any person or persons, entity or entities in command or control of the activity, or any part thereof at the time of the incident.

5. The term “incident” means any occurrence or series of occurrences having the same origin that cause damage or create a grave and imminent threat of damage.

6. The term “preventive measures” means any reasonable measures taken by any person in response to an incident, to prevent, minimize or mitigate loss or damage, or to undertake environmental clean-up.

7. The term “pure economic loss” means loss of income, unaccompanied by personal injury or damage to property, directly deriving from an economic interest in any use of the environment and incurred as a result of environmental damage.

8. The term “reinstatement measures” means any reasonable measures aiming to assess, reinstate, remediate or restore damaged or destroyed components of the environment.

9. The term “response action” means preventive measures and reinstatement measures.

Guideline 4: Response action

1. Should an incident arise during an activity dangerous to the environment, the operator should take prompt and effective response action.

2. The operator should promptly notify the competent public authority of the incident and the response action planned or taken and its effectiveness or expected effectiveness.

3. The competent public authority should be entitled to obtain from the operator all relevant information related to the incident. It may also order the operator to take specific response action that it deems necessary.

4. If the operator fails to take response action or such action is unlikely to be effective or timely, the competent public authority may take such action itself or authorize a third party to take such action and recover the costs from the operator.

Guideline 5: Liability

1. The operator should be strictly liable for damage caused by activities dangerous to the environment.

2. Without prejudice to paragraph 1, any person should be liable for damage caused or contributed to by not complying with applicable statutory or regulatory requirements or through wrongful, intentional, reckless or negligent acts or omissions. A violation of a specific statutory obligation should be considered fault per se.

Guideline 6: Exoneration from liability²

1. Without prejudice to additional exonérations provided for in domestic law, the operator should not be liable, or in the case of (c) below not liable to the degree not apportioned to him or her, if the operator proves that the damage was caused:

(a) By an act of God/force majeure (caused by natural phenomena of an exceptional, inevitable and uncontrollable nature);

² Some Governments reserve the right to return to the text of the present guideline.

(b) By armed conflict, hostilities, civil war, insurrections or terrorist attacks;

(c) Wholly or in part by an act or omission by a third party, notwithstanding safety measures appropriate to the type of activity concerned but in the case of claims for compensation, only if the damage caused was wholly the result of wrongful intentional conduct of a third party, including the person who suffered the damage;

(d) As a result of compliance with compulsory measures imposed by a competent public authority.

[6bis In relation to guideline 4.4, additional exonerations as referenced in paragraph 1 above or mitigating factors may include:

(i) That the activity was expressly authorized and fully in conformity with an authorization given under domestic law, that allows the effect on the environment;

(ii) [That the damage was caused by an activity which was not likely to cause damage according to the state of scientific and technical knowledge at the time that the activity was carried out]].

2. The operator may be exonerated wholly or in part towards a claimant if the operator proves that the damage resulted from the claimant's act or omission done with intent to cause damage, or that the damage resulted wholly or in part from the claimant's negligence.

Guideline 7: Joint and several liability

In the event of multiple operators their liability should be joint and several, or apportioned, as appropriate.

Guideline 8: Claims for compensation

1. Any person or group of persons, including public authorities, should be entitled to claim compensation for loss of life or personal injury, loss of or damage to property and pure economic loss in consequence of the occurrence of damage caused by activities dangerous to the environment in addition to, where appropriate, the reimbursement of the costs of preventive measures and reinstatement measures.

2. Domestic law may allow claims for compensation for environmental damage.

Guideline 9: Other claims

1. Any person or group of persons should be entitled to seek response action by competent public authorities if neither the operator nor the competent public authorities concerned are taking prompt and effective measures to redress environmental damage, provided that the person or group of persons has a sufficient interest or suffers the impairment of a right if so required by domestic law.

2. Any person or group of persons within the meaning of paragraph 1 above should have the right to challenge in administrative or judicial proceedings the legality of any act or omission by private persons or public authorities that contravenes domestic laws or regulations relating to damage caused by activities dangerous to the environment.

3. Any person or group of persons sustaining damage should be entitled to any information directly relevant to the presentation of a claim for compensation from the operator or the competent public authority in possession of such information, unless such disclosure is specifically prohibited by law or violates the legally protected interests of third parties.

Guideline 10: Financial limits

1. Liability pursuant to guideline 5, paragraph 1, may be limited in accordance with criteria established under any applicable domestic classification scheme for activities dangerous to the environment.

2. Given that the operator might be unable to meet his or her liability or that actual damages might exceed the operator's limit of liability, domestic law may provide for closure of potential compensation gaps by way of special funding or collective compensation mechanisms.

3. There should be no financial limit on liability arising under guideline 5, paragraph 2.

Guideline 11: Financial guarantees

1. The operator should, taking into account the availability of financial guarantees, be encouraged or required to cover liability under guideline 5, paragraph 1, for amounts not less than the minimum specified by law for the type of activity dangerous to the environment concerned and should continue to cover such liability, during the period of the time limit of liability, by way of insurance, bonds or other financial guarantees.

2. The competent public authority should periodically review the availability of and the minimum limits for financial guarantees, taking into account the views of relevant stakeholders, including the specialized and general insurance industry.

Guideline 12: Time limits for presentation of claims

1. Domestic law should establish that claims for compensation are inadmissible unless they are brought within a certain period of time from the date the claimant knew or ought to have known of the damage and the identity of the operator. In addition, claims should be inadmissible unless they are brought within a certain period of time following the occurrence of the damage.

2. Where the damage-causing incident is a series of occurrences having the same origin, the time limits established under the present guideline should run from the last of such occurrences. Where the damage-causing incident consists of a continuous occurrence, such time limits should run from the end of that continuous occurrence.

Guideline 13: Claims with foreign elements: applicable law

1. Subject to domestic laws on jurisdiction and in the absence of special rules established by contract or international agreement, any claim for compensation that raises a choice-of-law issue should be decided in accordance with the law of the place in which the damage occurred, unless the claimant chooses to base the claim on the law of the country in which the event giving rise to the damage occurred.

2. The timing of the claimant's choice pursuant to paragraph 1 should be determined by the law of the forum.

Guideline 14: Classification of hazardous substances and activities or installations³

1. Domestic law should provide for lists of hazardous substances and their threshold quantities, activities or installations dangerous to the environment, to make apparent the nature and scope of operators' risk of environmental liability and thereby strengthen the insurability of the risk of damage.

2. To enhance their effectiveness, such lists should be exhaustive rather than indicative and give due recognition to domestic priorities, in particular social and economic needs, environmental and public health sensitivities or other special circumstances.

[3. Domestic law might take into account the Globally Harmonized System of Classification and Labelling of Chemicals or might wish to follow and adapt, as necessary, existing classification schemes of relevant international legal instruments or laws and regulations of specific countries, illustrative samples of which are provided in annexes I and II to the commentary to the present guidelines.]

3 Some Governments reserve the right to return to the text of the present guideline and the related annexes.

Commentary to the guidelines for the development of domestic legislation on liability, response action and compensation for damage caused by activities dangerous to the environment¹

Commentary to guideline 1

The guidelines do not cover environmental degradation generally. Rather, they focus exclusively on damage caused by activities that are recognizably dangerous to the environment and are specifically identified as such by domestic law (see also commentary to guideline 3). Legislation that States might consider adopting domestically in accordance with the guidelines should, therefore, be viewed as complementing, rather than repudiating, existing general domestic law of civil liability, or as *lex specialis* applicable – in limited fashion – within the confines of “activities dangerous to the environment”.

Commentary to guideline 2

The term “liability” is used here in a comprehensive fashion and thus refers to both civil liability and administrative liability, if applicable, depending on the domestic legal system concerned.

Domestic law should incorporate some or all of these exclusions, it being understood that the reference in paragraph 2 (a) to “domestic laws establishing special liability regimes” encompasses any such treaty-based domestic rules and regulations.

Commentary to guideline 3

Conceptually, relevant domestic legislation will be concerned with damage caused by activities dangerous to the environment. In consequence, it should define:

- (a) Activities deemed dangerous to the environment, based on a combination of classification criteria or by drawing on the specific lists of hazardous substances, activities and installations (as set out in annexes I and II to the present commentary);
- (b) Damage as including also loss of life and personal injury, provided that they arise in connection with “environmental damage”.

Domestic legislation should ensure that “pure economic loss” linked to environmental damage, and the costs of restoring or reinstating the environment and of preventive measures, are made eligible for compensation. As a basic rule, measures of reinstatement should aim for on-site replacement of components of the environment damaged, unless their cost would be disproportionate to the damage sustained. In this regard, States could adopt flexible standards, based on contextually determined notions of reasonableness, by defining who is entitled to take measures, of what kind, and up to what level of environmental wholesomeness. Should reinstatement be physically impossible or its costs be unreasonable, the law should require offsetting measures such as the introduction of equivalent components into the environment, or the taking of off-site measures.

In addition, as regards environmental damage, domestic legislation might acknowledge such loss as being an intrinsic part of any approach to comprehensive legislation on liability, response action and compensation for environmental damage. Should domestic legislation incorporate such a comprehensive focus, domestic law might also put in place an appropriate mechanism for the assessment or valuation of compensation as a result of the loss of the use of the natural resources concerned.

As regards the factors determining the significance of environmental damage, the term “traditional cultural value” should be understood to include the use of the environment for religious purposes or purposes of worship. In defining the term “operator” the law should assure that the primarily responsible party is also the one in the best position to act towards minimizing the costs of environmental damage, i.e., the costs of prevention and of reinstatement and compensation. This includes any person or persons on whose behalf the activity is being carried out. Although the term “operator” includes any natural or legal, private or public person, domestic legislation might make this explicit.

¹ The present commentary has been developed by the secretariat with the assistance of environmental legal experts and with input from various Governments. It does not represent a negotiated text.

Commentary to guideline 4

Domestic law should specify the operator's and the competent public authority's obligations and, conversely, rights to take action in response to environmental damages resulting from incidents arising during an activity dangerous to the environment. Specifically, the operator should be required to act as a first responder and whenever unsuccessful or unable to avert or minimize damage, to notify the authorities promptly. Conversely, the competent public authority should be entitled to obtain relevant information from the operator, require the operator to take action or take such action itself or through third parties if the requisite response action is likely not to be otherwise forthcoming, effective or timely.

Commentary to guideline 5

Domestic legislation should channel liability to the operator. Strict liability should be the standard applicable to damage caused by activities hazardous to the environment. The imposition of strict liability requires in turn that domestic laws and regulations spell out the limited circumstances in which such liability arises, i.e., carefully define the critical notion of "activity dangerous to the environment" by reference to annex I and II criteria or lists.

Persons other than the operator should be subject to liability based on fault if their wrongful or illegal conduct caused or contributed to damage caused by an activity dangerous to the environment.

Commentary to guideline 6

Domestic law should include a generic "act of God/force majeure" basis for exoneration. In general, that basis will be understood to include natural phenomena of an exceptional, inevitable and uncontrollable nature. Another basis for exemption could be armed conflict, hostilities, civil war, insurrections or terrorist attacks. In addition, domestic law should retain a traditional exemption from liability, namely for damage arising out of third parties' conduct. The exoneration for third party conduct is narrow and should not include parties related to the operator, such as employees, agents or contractors. Domestic law should further recognize the degree of a claimant's contributory fault in causing the damage as a basis for a corresponding reduction of the operator's liability vis-à-vis that person. Exemptions from liability should also include compliance with compulsory measures imposed by public authorities. Lastly, domestic law might recognize self-reporting as a ground for mitigating damages owed to any governmental entity.

Commentary to guideline 7

To facilitate claimants' recovery, multiple operators should be jointly and severally liable. States might wish to provide for the allocation of liability among multiple defendants on the basis of individual contributions (or some other nexus) to the damage sustained, with or without prejudice to the claimant's position.

Commentary to guideline 8

While recognizing the primary importance of legal claims for personal injury and loss of property, domestic law may also recognize the compensability of environmental damage and provide a framework for its assessment and valuation. Domestic law may allow claims for compensation for environmental damage.

Commentary to guideline 9

Beyond enabling competent public authorities to take appropriate measures to respond to environmental damage, domestic mechanisms for compensating damage to the environment must strike a balance between the respective role of individuals and of community institutions in protecting, preserving and restoring the environment. To this end, domestic law should:

- (a) Permit civil society and non-governmental organizations access to justice for the purpose of correcting any public authority's failure to redress environmental damage;
- (b) Grant any person the right to institute judicial proceedings against another person acting in contravention of provisions of environmental law without having to meet applicable standing requirements;

(c) Enable a claimant to obtain relevant information directly bearing on his or her claim for compensation from the operator or the public authority in possession of such information unless disclosure of such information is specifically prohibited by law or violates the legally protected interests of third parties. Conversely, domestic law should enable the operator to obtain correspondingly relevant information from the competent public authority.

A group of persons includes persons “affected or likely to be affected by damage caused by activities dangerous to the environment, or promoting environmental protection and meeting any requirements under domestic law”.

Commentary to guidelines 10 and 11

Given that the operator might be unable to meet his or her liability or that actual damages might exceed the operator’s limit of liability, States might wish to consider alternative compensation mechanisms, to closing potential compensation gaps by way of special funding or collective compensation mechanisms. These could include hybrid public-private, industry-wide or operator-wide funds or other supplementary funding.

An effective system of liability, response action and compensation depends on adequate financial arrangements, such as insurance (including self-insurance), letters of credit and bonds, being in place to cover compensable claims for damage. Accordingly, domestic law should encourage or require the operator to enter into and maintain appropriate financial arrangements commensurate with the operator’s potential liabilities. In addition, States might impose a requirement to this effect after undertaking a cost-benefit analysis to compare the costs of covering liabilities with the scale of benefits obtained. States may wish to consider providing that no limit on liability applies in circumstances where the damage occurs from intention or grossly negligent conduct, or in other circumstances deemed appropriate by the State.

When setting up any such financial arrangements States should pay special attention to their feasibility and effectiveness by cooperating closely with and taking into account the interests of all relevant stakeholders. In particular, it is recommended that States should consult the insurance sector on the availability or development of financial guarantees to cover liability under the guidelines.

Commentary to guideline 12

Domestic legislation should incorporate two tier-based time limits into their liability, response action and compensation legislation. Typically, domestic law provides that claims for compensation should not be admissible unless they are brought within five years from the date the claimant knew or ought to have known of the damage and the identity of the operator; and, in any case, should be barred unless they are brought within 10–30 years of the occurrence of the damage.

Commentary to guideline 13

In respect of claims for compensation, domestic legislation should incorporate the principle of *lex damni*, i.e., the law of the State where damage occurs or may occur, as the default rule. Additionally, domestic law might give favourable consideration to permitting the claimant to choose the law where the event giving rise to damage occurred as an alternative. Domestic legislation that provides for this alternative should leave the timing of the claimant’s choice of law to be determined by the law of the forum.

Commentary to guideline 14

Any domestic liability, response action and compensation regime will require the identification of activities as dangerous to the environment. International and domestic practice suggests that the listing of specific activities in the relevant liability instrument is the most appropriate method of classification, because it makes apparent the nature and scope of the risk of liability and thereby strengthens insurability of risk. It also may contribute to deterring damage-causing activities.

Activities could be listed either by category, installation type, property of substances involved, or a combination thereof. Any list of hazardous substances may be subject to possibly applicable thresholds regarding their hazard potential, such as the quantity of the substances involved. Any classification lists should be viewed as providing exhaustive enumerations of activities dangerous to the environment, depending on national practice and policy preferences.

The Globally Harmonized System of Classification and Labelling of Chemicals² is a scheme mandated by the United Nations Conference on Environment and Development and administered by the United Nations Economic Commission for Europe. It establishes harmonized criteria for classifying substances and mixtures according to their health, environmental and physical hazards and is likely to prove an especially important guidance document for this purpose. It is already widely used internationally and implemented by States (67 countries, including many developing countries) domestically. Examples of other, specific classification lists - whether separate or combined - can be found in:

(a) 1993 Convention on Civil Liability for Damage Resulting from Activities Dangerous to the Environment (“Lugano Convention”), annex I (dangerous substances) and annex II (installations or sites for the incineration, treatment, handling or recycling of waste);

(b) Organization for Economic Cooperation and Development: Decision of the Council on the Exchange of Information concerning Accidents Capable of Causing Transfrontier Damage, 8 July 1988 – C(88)84/Final, appendix III (threshold quantities of dangerous substances);

(c) 2003 Protocol on Civil Liability and Compensation for Damage Caused by the Transboundary Effects of Industrial Accidents on Transboundary Waters to the 1992 Convention on the Protection and Use of Transboundary Watercourses and International Lakes and to the 1992 Convention on the Transboundary Effects of Industrial Accidents, annex I (hazardous substances and their threshold quantities for the purpose of defining hazardous activities);

(d) European Union Directive 2004/35/CE of the European Parliament and of the Council of 21 April 2004 on environmental liability with regard to the prevention and remedying of environmental damage, annex III.

Any such domestic lists or classifications of hazardous substances, activities or installations should be kept up to date to reflect changes in the international classification schemes concerned, as new information or knowledge emerges.

Additionally, the laws and regulations of several countries, such as the United States of America Comprehensive Environmental Response, Compensation and Liability Act (CERCLA), 42 U.S.C. §9601 (14), the New Zealand Hazardous Activities and Industries List, the Indian Manufacture, Storage and Import of Hazardous Chemical (Amendment) Rules, 2000, or the Canadian regulations under the Environmental Protection Act, section 200, could provide guidance on how to classify relevantly substances, activities or installations as hazardous.

Annexes

Annexes I and II draw on some international and domestic legal instruments and regulations to provide specific, non-exhaustive illustrations of hazardous substances and activities and installations deemed dangerous to the environment.

Annex I

Sample list of hazardous substances

I. List of hazard characteristics¹

A. Explosive: An explosive substance or waste is a solid or liquid substance or waste (or mixture of substances or wastes) that is in itself capable by chemical reaction of producing gas at such a temperature and pressure and at such a speed as to cause damage to the surroundings.

B. Flammable liquids: The word “flammable” has the same meaning as “inflammable”. Flammable liquids are liquids, or mixtures of liquids, or liquids containing solids in solution or suspension (for example, paints, varnishes and lacquers, but not including substances or wastes otherwise classified on account of their dangerous characteristics), which give off a flammable vapour at temperatures of not more than 60.5° C, closed-cup test, or not more than 65.6° C, open-cup test. (Since the results of open-cup tests and of closed-cup tests are not strictly comparable and even individual results by the same test are often variable, regulations varying from the above figures to make allowance for such differences would be within the spirit of this definition).

C. Flammable solids: Solids, or waste solids, other than those classed as explosives, that under conditions encountered in transport are readily combustible, or may cause or contribute to fire through friction.

D. Substances or wastes liable to spontaneous combustion: Substances or wastes that are liable to spontaneous heating under normal conditions encountered in transport, or to heating up on contact with air, and being then liable to catch fire.

E. Substances or wastes that, in contact with water, emit flammable gases: Substances or wastes that, by interaction with water, are liable to become spontaneously flammable or to give off flammable gases in dangerous quantities.

F. Oxidizing: Substances or wastes that, while in themselves not necessarily combustible, may, generally by yielding oxygen cause, or contribute to, the combustion of other materials.

G. Organic peroxides: Organic substances or wastes that contain the bivalent-o-o-structure are thermally unstable substances that may undergo exothermic self-accelerating decomposition.

H. Poisonous (acute): Substances or wastes liable either to cause death or serious injury or to harm human health if swallowed or inhaled or by skin contact.

I. Infectious substances: Substances or wastes containing viable micro-organisms or their toxins that are known or suspected to cause disease in animals or humans.

J. Corrosives: Substances or wastes that, by chemical action, will cause severe damage when in contact with living tissue, or, in the case of leakage, will materially damage, or even destroy, other goods or the means of transport; they may also cause other hazards.

K. Liberation of toxic gases in contact with air or water: Substances or wastes that, by interaction with air or water, are liable to give off toxic gases in dangerous quantities.

L. Toxic (delayed or chronic): Substances or wastes that, if they are inhaled or ingested or if they penetrate the skin, may involve delayed or chronic effects, including carcinogenicity.

M. Ecotoxic: Substances or wastes that if released present or may present immediate or delayed adverse impacts to the environment by means of bioaccumulation or toxic effects upon biotic systems.

N. Flammable gases: Substances that in a gaseous state at normal pressure and mixed with air become flammable and the boiling point of which at normal pressure is 20° C or below.

O. Substances capable, by any means, after disposal, of yielding another material, e.g., leachate, which possess any of the characteristics listed above.

¹ Derived from the Basel Convention on the Control of Transboundary Movements of Hazardous Wastes and their Disposal; 2003 Protocol on Civil Liability and Compensation for Damage Caused by the Transboundary Effects of Industrial Accidents on Transboundary Waters to the 1992 Convention on the Protection and Use of Transboundary Watercourses and International Lakes and to the 1992 Convention on the Transboundary Effects of Industrial Accidents.

II. Examples of hazardous substances²

CAS ³ number	Chemical name
93-76-5	2,4,5-T and its salts
75-07-0	Acetaldehyde
60-35-5	Acetamide
75-05-8	Acetonitrile
98-8622	Acetophenone
53-96-3	2-Acetylaminofluorene
107-02-8	Acrolein
79-06-1	Acrylamide
79-10-7	Acrylic acid
107-13-1	Acrylonitrile
77536-66-4	Actinolite
309-00-2	Aldrin
107-05-1	Allyl chloride
92-67-1	4-Aminobiphenyl
7790-98-9	Ammonium perchlorate
12172-73-5	Amosite
62-53-3	Aniline
90-04-0	o-Anisidine
77536-67-5	Anthophyllite
7440-38-2	Arsenic
1332-21-4	Asbestos
71-43-2	Benzene
92-87-5	Benzidine
50-32-8	Benzo(A)Pyrene
98-07-7	Benzotrichloride
100-44-7	Benzyl chloride
57-57-8	beta-Propiolactone
485-31-4	Binapacryl
92-52-4	Biphenyl
117-81-7	Bis(2-ethylhexyl)phthalate (DEHP)
542-88-1	Bis(chloromethyl)ether
75-25-2	Bromoform
106-99-0	1,3-Butadiene
156-62-7	Calcium cyanamide
105-60-2	Caprolactam
2425-06-1	Captafol
133-06-2	Captan
63-25-2	Carbaryl
75-15-0	Carbon disulfide
630-08-0	Carbon monoxide
56-23-5	Carbon tetrachloride
463-58-1	Carbonyl sulfide
120-80-9	Catechol
133-90-4	Chloramben
57-74-9	Chlordane
7782-50-5	Chlorine
79-11-8	Chloroacetic acid
532-27-4	2-Chloroacetophenone
107-07-3	2-chloroethanol
108-90-7	Chlorobenzene
510-15-6	Chlorobenzilate
6164-98-3	Chlorodimeform

2 Based on the Rotterdam Convention on the Prior Informed Consent Procedure for Certain Hazardous Chemicals and Pesticides in International Trade, annex III; the United States of America Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) hazardous air pollutants, 42 U.S.C. 7412 (2006); 2007 CERCLA Priority List of Hazardous Substances; and Canada's Environmental Protection Act (CEPA) Section 200 CRAIM list of regulated substances.

3 CAS (Chemical Abstracts Service) registry numbers are unique numerical identifiers for chemical elements, compounds, polymers, biological sequences, mixtures and alloys. CAS, a division of the American Chemical Society, assigns these identifiers with the intention to render database searches more convenient.

CAS ³ number	Chemical name
67-66-3	Chloroform
107-30-2	Chloromethyl methyl ether
76-06-2	Chloropicrin (trichloronitromethane)
126-99-8	Chloroprene
7790-94-5	Chlorosulfonic acid (chlorosulphonic acid)
1319-77-3	Cresols/Cresylic acid (isomers and mixture)
108-39-4	m-Cresol
95-48-7	o-Cresol
106-44-5	p-Cresol
12001-28-4	Crocidolite
98-82-8	Cumene
506-68-3	Cyanogen bromide
110-82-7	Cyclohexane
94-75-7	2,4-D, salts and esters
3547-04-4	DDE
50-29-3	DDT
334-88-3	Diazomethane
132-64-9	Dibenzofurans
96-12-8	1,2-Dibromo-3-chloropropane
106-93-4	1,2-dibromoethane (EDB)
84-74-2	Dibutylphthalate
111-44-4	Dichloroethyl ether (Bis(2-chloroethyl)ether)
107-06-2	1,2-Dichloroethane (ethylene dichloride)
62-73-7	Dichlorvos
106-46-7	1,4-Dichlorobenzene(p)
91-94-1	3,3-Dichlorobenzidene
107-06-2	1,2-Dichloroethane (ethylene dichloride)
542-75-6	1,3-Dichloropropene
60-57-1	Dieldrin
111-42-2	Diethanolamine
121-69-7	N,N-Diethyl aniline (N,N-Dimethylaniline)
64-67-5	Diethyl sulphate
119-90-4	3,3-Dimethoxybenzidine
60-11-7	Dimethyl aminoazobenzene
119-93-7	3,3'-Dimethyl benzidine
79-44-7	Dimethyl carbamoyl chloride
68-12-2	Dimethyl formamide
57-14-7	1,1-Dimethyl hydrazine
131-11-3	Dimethyl phthalate
77-78-1	Dimethyl sulphate
75-18-3	Dimethyl sulphide
534-52-1	4,6-Dinitro-o-cresol and salts
51-28-5	2,4-Dinitrophenol
121-14-2	2,4-Dinitrotoluene
88-85-7	Dinoseb and its salts and esters
123-91-1	1,4-Dioxane (1,4-Diethyleneoxide)
122-66-7	1,2-Diphenylhydrazine
17804-35-2 1563-66-2 137-26-8	Dustable powder formulations containing a combination of: benomyl at or above 7 per cent, carbofuran at or above 10 per cent, thiram at or above 15 per cent
106-89-8	Epichlorohydrin (1-Chloro-2 3-epoxypropane)
106-88-7	1,2-Epoxybutane
140-88-5	Ethyl acrylate
51-79-6	Ethyl carbamate (urethane)
75-00-3	Ethyl chloride (Chloroethane)
100-41-4	Ethylbenzene
106-93-4	Ethylene dibromide (Dibromoethane)
107-06-2	Ethylene dichloride (1,2-Dichloroethane)
107-21-1	Ethylene glycol
151-56-4	Ethylene imine (Aziridine)
75-21-8	Ethylene oxide
96-45-7	Ethylene thiourea
75-34-3	Ethylidene dichloride (1,1-Dichloroethane)
640-19-7	Fluoroacetamide

CAS ³ number	Chemical name
50-00-0	Formaldehyde
86290-81-5	Gasoline (motor fuel)
608-73-1	HCH (mixed isomers)
76-44-8	Heptachlor
118-74-1	Hexachlorobenzene
87-68-3	Hexachlorobutadiene
77-47-4	Hexachlorocyclopentadiene
67-72-1	Hexachloroethane
822-06-0	Hexamethylene-1,6-diisocyanate
680-31-9	Hexamethylphosphoramide
110-54-3	Hexane
302-01-2	Hydrazine
10035-10-6	Hydrobromic acid (hydrogen bromide)
7647-01-0	Hydrochloric acid
7664-39-3	Hydrogen fluoride (Hydrofluoric acid)
7722-84-1	Hydrogen peroxide (conc 52% or greater)
123-31-9	Hydroquinone
78-59-1	Isophorone
463-51-4	Ketene
7439-92-1	Lead
58-89-9	Lindane (all isomers)
108-31-6	Maleic anhydride
7439-97-6	Mercury
78-85-3	Methacrolein (methacrylaldehyde)
30674-80-7	Methacryloyloxyethyl isocyanate
10265-92-6	Methamidophos (Soluble liquid formulations of the substance that exceed 600 g active ingredient/l)
67-56-1	Methanol
72-43-5	Methoxychlor
75-64-9	2-methyl-2-propanamine (tert-butylamine)
74-83-9	Methyl bromide (Bromomethane)
74-87-3	Methyl chloride (Chloromethane)
71-55-6	Methyl chloroform (1,1,1-Trichloroethane)
78-93-3	Methyl ethyl ketone (2-Butanone)
60-34-4	Methyl hydrazine
74-88-4	Methyl iodide
108-10-1	Methyl isobutyl ketone (Hexone)
624-83-9	Methyl isocyanate
80-62-6	Methyl methacrylate
1634-04-4	Methyl tert butyl ether
78-94-4	Methyl vinyl ketone
101-14-4	4,4-Methylene bis(2-chloroaniline)
75-09-2	Methylene chloride (Dichloromethane)
101-77-9	4,4'-Methylenedianiline
101-68-8	Methylene diphenyl diisocyanate (MDI)
298-00-0	Methyl-parathion (emulsifiable concentrates (EC) at or above 19.5% active ingredient and dusts at or above 1.5% active ingredient)
6923-22-4	Monocrotophos
8030-30-6	Naphtha
91-20-3	Naphthalene
8006-14-2	Natural gas
98-95-3	Nitrobenzene
92-93-3	4-Nitrobiphenyl
10102-44-0	Nitrogen dioxide
100-02-7	4-Nitrophenol
79-46-9	2-Nitropropane
62-75-9	N-Nitrosodimethylamine
59-89-2	N-Nitrosomorpholine
684-93-5	N-Nitroso-N-methylurea
20816-12-0	Osmium tetroxide
56-38-2	Parathion
82-68-8	Pentachloronitrobenzene (Quintobenzene)
87-86-5	Pentachlorophenol (and its salts and esters)

CAS ³ number	Chemical name
7616-94-6	Perchloryl fluoride (Trioxychlorofluoride)
108-95-2	Phenol
106-50-3	p-Phenylenediamine sulfate
75-44-5	Phosgene
13171-21-6 (mixture, (E)&(Z) isomers) 23783-98-4 ((Z)-isomer) 297-99-4 ((E)-isomer))	Phosphamidon (Soluble liquid formulations of the substance that exceed 1000 g active ingredient/l)
7803-51-2	Phosphine
7723-14-0	Phosphorus
85-44-9	Phthalic anhydride
36355-01-8 (hexa-) 27858-07-7 (octa-) 13654-09-6 (deca-)	Polybrominated biphenyls (PBB)
1336-36-3	Polychlorinated biphenyls (Aroclors)(PCB)
61788-33-8	Polychlorinated terphenyls (PCT)
130498-29-2	Polycyclic aromatic hydrocarbons
1120-71-4	1,3-Propane sultone
123-38-6	Propionaldehyde
114-26-1	Propoxur (Baygon)
75-55-8	1,2-Propylenimine (2-Methyl aziridine)
78-87-5	Propylene dichloride (1,2-Dichloropropane)
75-56-9	Propylene oxide
91-22-5	Quinoline
106-51-4	Quinone
7775-09-9	Sodium chlorate
7803-52-3	Stibine
100-42-5	Styrene
96-09-3	Styrene oxide
1746-01-6	2,3,7,8-Tetrachlorodibenzo-p-dioxin
79-34-5	1,1,2,2-Tetrachloroethane
127-18-4	Tetrachloroethylene (Perchloroethylene)
78-00-2	Tetraethyl lead
75-74-1	Tetramethyl lead
7719-09-7	Thionyl chloride
7550-45-0	Titanium tetrachloride
108-88-3	Toluene
95-80-7	2,4-Toluene diamine
584-84-9	2,4-Toluene diisocyanate
95-53-4	o-Toluidine
8001-35-2	Toxaphene (chlorinated camphene)
77536-68-6	Tremolite
4342-36-3	Tributyltin benzoate
1461-22-9	Tributyltin chloride
1983-10-4	Tributyltin fluoride
24124-25-2	Tributyltin linoleate
2155-70-6	Tributyltin methacrylate
85409-17-2	Tributyltin naphthenate
56-35-9	Tributyltin oxide
120-82-1	1,2,4-Trichlorobenzene
79-00-5	1,1,2-Trichloroethane
79-01-6	Trichloroethylene
95-95-4	2,4,5-Trichlorophenol
88-06-2	2,4,6-Trichlorophenol
121-44-8	Triethylamine
1582-09-8	Trifluralin
540-84-1	2,2,4-Trimethylpentane
126-72-7	Tris (2,3-dibromopropyl) phosphate
108-05-4	Vinyl acetate
593-60-2	Vinyl bromide
75-01-4	Vinyl chloride
75-35-4	Vinylidene chloride (1,1-Dichloroethylene)
108-38-3	m-Xylenes
95-47-6	o-Xylenes

CAS ³ number	Chemical name
106-42-3	p-Xylenes
1330-20-7	Xylenes (isomers and mixers)
0	Antimony compounds
0	Arsenic compounds (inorganic including arsine)
0	Beryllium compounds
0	Cadmium compounds
0	Chromium compounds
0	Cobalt compounds
0	Coke oven emissions
0	Cyanide compounds
0	Glycol ethers
0	Lead compounds
0	Manganese compounds
0	Mercury compounds
0	Fine mineral fibres
0	Nickel compounds
0	Polycyclic organic matter
0	Radionuclides (including radon)
0	Selenium compounds
0	Tributyltin compounds

Annex II

Sample list of activities and installations dangerous to the environment

I. Examples of hazardous installations¹

1. Installations or sites for the partial or complete disposal of solid, liquid or gaseous wastes by incineration on land or at sea.
2. Installations or sites for thermal degradation of solid, gaseous or liquid wastes under reduced oxygen supply.
3. Installations or sites for high temperature degradation or thermal degasification of solid, gaseous or liquid wastes.
4. Installations or sites for thermal recovery of compounds from solid or liquid wastes.
5. Installations or sites for chemical, physical or biological treatment of wastes for recycling or disposal.
6. Installations or sites for blending or mix prior to submission to the operation of a site for permanent deposit.
7. Installations or sites for repacking prior to submission to the operation of a site for permanent deposit.
8. Installations or sites for handling and treatment of solid, liquid or gaseous wastes for reuse or recycling such as:
 - o Solvent reclamation or regeneration;
 - o Recycling or reclamation of organic substances (not used as solvents) and inorganic materials;
 - o Regeneration of acid and bases;
 - o Recovery of components used for pollution abatement;
 - o Recovery of components from catalysts;
 - o Waste oil re-refining or other reuses of waste oil;
 - o Recovery of components from discarded cars.
9. Installations or sites for storage of materials intended for submission to any operation in the present annex or to the operation of a site for the permanent deposit of waste, temporary storage excluded, pending collection, on the site where it is produced.
10. Crude oil refineries (excluding undertakings manufacturing only lubricants from crude oil) and installations for the gasification and liquefaction of 500 tons or more of coal or bituminous shale per day.
11. Thermal power stations and other combustion installations with a heat output of 300 megawatts or more and nuclear power stations and other nuclear reactors (except research installations for the production and conversion of fissionable and fertile materials, whose maximum power does not exceed 1 kilowatt continuous thermal load).

¹ Based on the 1993 Convention on Civil Liability for Damage Resulting from Activities Dangerous to the Environment (“Lugano Convention”), annex II (installations or sites for incineration, treatment, handling or recycling waste); Convention on Environmental Impact Assessment in a Transboundary Context of 25 February 1991 (“Espoo”), appendix I; and European Union Directive 2004/35/CE of the European Parliament and of the Council of 21 April 2004 on environmental liability with regard to the prevention and remedying of environmental damage, annex III.

12. Installations solely designed for the production or enrichment of nuclear fuels, for the reprocessing of irradiated nuclear fuels or for the storage, disposal and processing of radioactive waste.
13. Major installations for the initial smelting of cast iron and steel and for the production of non-ferrous metals.
14. Installations for the extraction of asbestos and for the processing and transformation of asbestos and products containing asbestos: for asbestos-cement products, with an annual production of more than 20,000 tons finished product; for friction material, with an annual production of more than 50 tons finished product; and for other asbestos utilization of more than 200 tons per year.
15. Integrated chemical installations.
16. Construction of motorways, express roads */ and lines for long-distance railway traffic and of airports with a basic runway length of 2,100 metres or more.
17. Large-diameter oil and gas pipelines.
18. Trading ports and also inland waterways and ports for inland-waterway traffic that permit the passage of vessels of over 1,350 tons.
19. Waste-disposal installations for the incineration, chemical treatment or landfill of toxic and dangerous wastes.
20. Large dams and reservoirs.
21. Groundwater abstraction activities in cases where the annual volume of water to be abstracted amounts to 10 million cubic metres or more.
22. Pulp and paper manufacturing of 200 air-dried tons or more per day.
23. Major mining, on-site extraction and processing of metal ores or coal.
24. Offshore hydrocarbon production.
25. Major storage facilities for petroleum, petrochemical and chemical products.
26. Deforestation of large areas.
27. Transport by road, rail, inland waterways, sea or air of dangerous or polluting goods.
28. Any contained use, including transport, involving genetically modified micro-organisms.
29. All discharges of hazardous substances into groundwater and inland surface water.
30. Any deliberate release into the environment, transport and placing on the market of genetically modified organisms.

II. Activities typically deemed hazardous²

Activity or industry	Hazardous substances involved
1. Abrasive blasting: carrying out abrasive blast cleaning (other than cleaning carried out in fully enclosed booths) or disposing of abrasive blasting material.	Dependent on material being removed, heavy metals, iron.
2. Acid/alkali plant, formulation and bulk storage.	Mercury, sulphuric, hydrochloric and nitric acids, sodium and calcium hydroxide.
3. Agrichemical spray contractor's premises used for filling and washing out tanks for commercial agrichemical application.	Arsenic, lead, copper, organochlorine pesticides, organophosphate pesticides, herbicides, fungicides, carbamates and synthetic pyrethroids.
4. Airports: fuel storage, workshops, washdown areas, stormwater run-off from hardstanding.	Hydrocarbons, metals.
5. Analysts: commercial analytical laboratory sites.	Solvents, acids, mercury.
6. Asbestos products production and disposal. Also sites with buildings containing asbestos products known to be in a deteriorated condition.	Asbestos.
7. Asphalt or bitumen manufacture or bulk storage: manufacturing asphalt or bitumen, or bulk storage of these products, other than at a single-use site used by a mobile asphalt plant.	Petroleum hydrocarbons, polycyclic aromatic hydrocarbons.
8. Battery manufacture or recycling: assembling, disassembling, manufacturing or recycling batteries (other than storing batteries for retail sale).	Heavy metals (lead, mercury, zinc, cadmium, nickel, antimony, silver, manganese), sulphuric acid.
9. Brake lining manufacturers, repairers and recyclers.	Asbestos, copper.
10. Cement or lime manufacturing: manufacturing cement or lime from limestone material using a kiln and storing wastes from the manufacturing process.	Lime, calcium hydroxide, alkalis.
11. Cemeteries.	Nitrates, lead, formaldehyde, biological hazards.
12. Chemical manufacture and formulation and bulk storage such that land use consent is required.	Wide range of organic and inorganic compounds.
13. Coal and coke yards.	Polycyclic aromatic hydrocarbons.
14. Concrete manufacture and bulk cement storage.	Cement, calcium hydroxide, alkalis.

² Derived from the New Zealand Hazardous Activities and Industries List (HAIL) with Hazardous Substances, February 2004.

Activity or industry	Hazardous substances involved
15. Defence works and defence establishments, including ordinance storage and training areas where live firing is carried out.	Explosives, lead, copper, antimony (firing ranges), solvents and metals (workshops), hydrocarbon storage.
16. Drum and tank reconditioning or recycling.	Wide range of chemicals from drums.
17. Dry cleaning plants: restricted to premises where dry cleaning is carried out and solvents are stored.	Trichloroethylene, 1,1,1-trichloroethane, perchloroethylene, carbon tetrachloride, volatile organic compounds.
18. Electrical transformers: manufacturing, repairing or disposing of electrical transformers or other heavy electrical equipment.	Polychlorinated biphenyls, hydrocarbons, copper, tin, lead, mercury.
19. Electronics: manufacturing, reconditioning.	Metals (e.g., copper, tin, lead), solvents.
20. Engine reconditioning: use of solvents and degreasers.	Solvents, hydrocarbons, heavy metals.
21. Explosive production or bulk storage.	Acetone, nitric and sulphuric acid, ammonium nitrate, fuel oil, polycaprolactone nitroglycerine, lead, mercury, copper, aluminium, silver, sodium hydroxide, explosives.
22. Fertilizer manufacture: manufacturing or bulk storage of agriculture fertilizer.	Calcium phosphate, calcium sulphate, copper chloride, sulphur, sulphuric acid, molybdenum, selenium, boron, cadmium, nitrates, ammonia.
23. Foundry operations: commercial production of metal products by injecting or pouring molten metal into moulds and associated activities.	Metals, particularly (iron, aluminium, lead, zinc, copper, tin, nickel, chromium and oxides, chlorides, fluorides and sulphates of these. Acids, coke, fuel oil.
24. Gasworks: manufacture of town gas from coal or oil feedstocks.	Polycyclic aromatic hydrocarbons, phenolics, benzene, toluene, ethylbenzene and xylenes, metals (particularly arsenic, lead, copper, chromium), cyanide compounds, sulphides and sulphates, thiocyanates ammonia, nitrates, coke.
25. Gun, pistol or rifle ranges.	Metals: lead, antimony, copper, zinc, tin, nickel.
26. Ironworks and steelworks.	Benzene, toluene, ethylbenzene and xylenes, phenolics, polycyclic aromatic hydrocarbons, metals and oxides of iron, nickel, copper, chromium, magnesium and manganese.

Activity or industry	Hazardous substances involved
27. Landfill sites.	Dependent on original waste composition, hydrocarbons, benzene, toluene, ethylbenzene and xylenes, polycyclic aromatic hydrocarbons, metals, organic acids, landfill gas, ammonia.
28. Livestock dip or spray race operations.	Arsenic, organochlorines and organophosphates, carbamates and synthetic pyrethroids.
29. Market gardens, orchards, glasshouses or other areas where the use of persistent agricultural chemicals occurred.	Arsenic, lead, copper, mercury, organochlorines and organophosphates, carbamates and synthetic pyrethroids.
30. Metal treatment or coating: including polishing, anodizing, galvanizing, pickling, electroplating, heat treatment using cyanide compounds and finishing. Curing works or commercially finishing leather.	Metals (zinc, aluminium, cadmium, chromium, lead, copper, tin), acids (sulphuric, nitric, hydrochloric, phosphoric), sodium hydroxide, solvents and degreasers, cyanide.
31. Mining and extractive industries and mineral processing: including chemically or physically extracting metalliferous ores, exposure of faces or release of groundwater containing hazardous contaminants and storing hazardous wastes, including waste dumps and tailings dams, but not gravel extraction.	Arsenic, mercury, cyanides, sulphides, metals – also workshop activities, fuel storage.
32. Motor vehicle workshops.	Hydrocarbons, polycyclic aromatic hydrocarbons, solvents, metals.
33. Paint manufacture and formulation.	Solvents, resins, heavy metals.
34. Pest control: commercially operating premises (or former pest destruction board, now regional council sites) where storage and preparation of pesticide occurs, including preparation of poisoned baits and filling or washing of tanks.	Arsenic, cyanide, strychnine, mercury, phosphorus, 1080, organochlorines and organophosphates, carbamates and synthetic pyrethroids.
35. Pesticide manufacture (including animal poisons, insecticides, fungicides and herbicides) commercially manufacturing, blending, mixing or formulating pesticides.	Wide range of insecticides, herbicides and fungicides, including arsenic, lead, mercury, copper, tin, chromium, organochlorines, organonitrogens, organophosphates, acid herbicides, dioxin, carbamates.
36. Petroleum or petrochemical industries or storage, including oil production and operating a petroleum depot, terminal, blending plant or refinery, retail or commercial refuelling facility, and facilities for recovery, reprocessing or recycling petroleum-based materials and bulk storage above and below ground.	Hydrocarbons, including benzene, toluene, ethylbenzene, and xylenes, polycyclic aromatic hydrocarbons, solvents, lead.
37. Pharmaceutical manufacture: commercially manufacturing, blending, mixing or formulating pharmaceuticals, including animal remedies.	Solvents.

Activity or industry	Hazardous substances involved
38. Port activities: including dry docks and ship and boat maintenance facilities.	Metals, paint residues (tin, lead), fuel storage.
39. Power stations and switchyards	Polychlorinated biphenyls, asbestos, metals (in fly ash), water treatment chemicals (thermal stations).
40. Printing: commercial printing, using metal type, inks and dyes, or solvents.	Solvents, acids, alkalis, heavy metals.
41. Railway yards: operating a railway yard including goods-handling yards, workshops, refuelling facilities and maintenance areas.	Hydrocarbons, heavy metals, solvents, creosote.
42. Sawmills: use of antisapstain chemicals during milling.	Antisapstain fungicides, pentachlorophenol, hydrocarbons.
43. Scrapyards: operating a scrapyard including automotive dismantling or wrecking yard or scrap metal yard.	Metals, hydrocarbons, solvents.
44. Service stations.	Hydrocarbons, lead, copper.
45. Smelting or refining: fusing or melting metalliferous ores or refining the metal.	Metals and oxides, fluorides and chlorides thereof.
46. Tannery, fellmongery or hide curing: operating a tannery or fellmongery or hide curing works or commercially finishing leather.	Chromium, manganese, copper, ammonia, sulphides, acids, sodium hydroxide, lime, formaldehyde, solvents, cyanide.
47. Transport depots.	Dependent on products being transported, hydrocarbons, metals and solvents in workshops.
48. Storage tanks and drum storage for fuel, chemicals and liquid waste.	Wide range of chemicals, biological hazards.
49. Waste storage, treatment and disposal, including land disposal of wastes, but not the use of biosolids as soil conditioners.	Depends on type of waste: biological hazards (bacteria, viruses), metals, polycyclic aromatic hydrocarbons, semi-volatile organic compounds, solvents.
50. Wood treatment and preservation and bulk storage of treated timber.	Pentachlorophenol, copper, arsenic, chromium, boron organo-tin, polycyclic aromatic hydrocarbons and phenolics (creosote), organochlorine pesticides.
51. Wool, hide and skin merchants (e.g., drying, scouring).	Detergents, pesticides, bleaching agents (e.g., hydrogen peroxide).
52. Any site that has been, or could be, subject to the migration of hazardous substances from hazardous substances present in soil or water on adjacent sites.	Dependent on contaminants associated with adjacent property.
53. Any other facility or activity that stores, uses or disposes of hazardous substances in sufficient quantity that intentional or accidental discharge of the substance could be a risk to human health or the environment.	

Annex III

Suggested action for consideration by the Governing Council

The Governing Council,

Recalling Principle 13 of the Rio Declaration on Environment and Development,¹ which stipulates that “States shall develop national law regarding liability and compensation for the victims of pollution and other environmental damage”,

Recognizing that the existence of national legislation on liability and compensation for environmental damages resulting from human activities has been largely recognized as a significant element for the protection of the environment,

Recalling its decision 25/11 III of 20 February 2009, entitled “Draft guidelines for the development of national legislation on liability, response action and compensation for damage caused by activities dangerous to the environment”, in which it took note of the draft guidelines and requested the secretariat to carry out further work on the guidelines with a view to their adoption at its next special session,

Noting with appreciation the outcome of the intergovernmental meeting to review and further develop draft guidelines for the development of domestic legislation on liability, response action and compensation for damage caused by activities dangerous to the environment, held in Nairobi from 9 to 11 November 2009,

1. [Decides to adopt] the guidelines for the development of domestic legislation on liability, response action and compensation for damage caused by activities dangerous to the environment, as set out in the annex to the present decision;
2. Also decides that the secretariat should disseminate the guidelines, with the commentary and annexes attached thereto, to all countries and invites countries to provide further comments on the commentary to enhance its quality;
3. Encourages countries, in particular developing countries and countries with economies in transition, to apply the guidelines in the development or amendment of their national legislation related to liability, response action and compensation for activities dangerous to the environment;
4. Requests the Executive Director to assist countries, upon their request, [subject to the availability of resources] with the development or amendment of national legislation, policies and strategies on liability, response action and compensation for damage caused by activities dangerous to the environment;
5. Also requests the Executive Director to report on progress through regular reporting on the implementation of the programme of work and budget.
