- 152 Janet L. Sawin, "The Benefits of a Low-Carbon Future," *Eye on Earth* (Worldwatch Institute), 26 September 2007, at [www.worldwatch.org/node/5373](http://www.worldwatch.org/node/5373); Renewable Energy Policy Network for the 21st Century (REN21), *Renewables 2007 Global Status Report* (Paris: REN21 Secretariat and Washington, DC: Worldwatch Institute, 2008). These figures are for investments in renewables production capacity. In addition, the solar PV and biofuels industries made substantial capital investments in new manufacturing plant and equipment in 2006. Investment by the solar PV industry in 2006 was at least \$8 billion and was expected to exceed \$10 billion in 2007. Estimate for 2007 from REN21, *idem*.
- 153 UNEP and New Energy Finance Ltd., op. cit. note 3, p. 11. Included in the investment figure are the following projects: all biomass, geothermal and wind generation projects of more than 1 megawatt (MW), all hydro projects between 0.5 MW and 50 MW, all solar projects of more than 0.3 MW, all marine energy projects, and all biofuels projects with a capacity of 1 million liters or more per year. China defines small hydro as up to 50 MW, but elsewhere a cutoff point of 10 MW is typically used.

- 234 *Ibid.*, pp. 45–46.
- 235 A 1999 study estimated labor productivity in the wind power sector of Asian, Latin American, and East European countries to be 20 percent lower than in Western Europe. European Wind Energy Association (EWEA), Forum for Energy and Development, and Greenpeace, *Wind Force 10: A Blueprint to Achieve 10% of the World’s Electricity from Wind Power by 2020* (London: 1999).
- 236 Greenpeace and GWEC, op. cit. note 199, pp. 45–46. The study’s jobs-per-megawatt formula appears to be well within the range of other reports. The European Commission, for example, noted in a 1997 report that, as a rough rule of thumb, 1 megawatt of wind power generating capacity installed creates jobs for 15–19 people under European market conditions, and perhaps double that in countries with lower labor productivity, per European Commission, Directorate-General for Energy, “*Wind Energy—The Facts*,” Vol. 3 (Brussels: 1997). In another 1997 study, Greenpeace Germany estimated that 14 jobs were created by manufacturing and installing 1 megawatt, per Greenpeace Germany, “*Solar-Jobs 2010: Neue Arbeitsplätze durch neue Energien*,” at [www.greenpeace.de/GP\\_DOK\\_30/STU\\_KURZ](http://www.greenpeace.de/GP_DOK_30/STU_KURZ). Sawin, “*Another Sunny Year for Solar Power*,” *Vital Signs Online* (Worldwatch Institute), 2008, at [www.worldwatch.org/node/5449](http://www.worldwatch.org/node/5449).
- 241 Sawin, “*Solar Power Shining Bright*,” op. cit. note 240, p. 38; Sawin, “*Another Sunny Year for Solar Power*,” op. cit. note 240. Ninety percent of production Chinese output exported from “*China Faltering on Support for Solar Power: Report*,” *Environmental News Network*, 19 September 2007.
- 242 Table II.1-8 from EPIA and Greenpeace International, op. cit. note 238, p. 26, and from Li Junfeng et al., *China Solar PV Report 2007* (Beijing: China Environmental Science Press, 2007), p. 10.
- 243 Martinot and Li, op. cit. note 178, p. 24. Q-Cells from Sawin, “*Another Sunny Year for Solar Power*,” op. cit. note 109.
- 244 Solar Energy Industries Association, *Our Solar Power Future. The U.S. Photovoltaics Industry Roadmap Through 2030 and Beyond* (Washington, DC: September 2004), p. 7. The SEIA figures seem sharply at odds with a PV module and cell manufacturers survey undertaken by the U.S. Department of Energy’s Energy Information Administration, which found that in 2005, 29 companies offered 3,108 person years of employment, per U.S. EIA, “*Annual Photovoltaic Module/Cell Manufacturers Survey*,” Form EIA-63B, at [www.eia.doe.gov/cneaf/solar.renewables/page/rea\\_data/table55.html](http://www.eia.doe.gov/cneaf/solar.renewables/page/rea_data/table55.html). Presumably, SEIA is using a far broader definition of the industry and its suppliers.

- 413 A 2004 Apollo Alliance Report argued that a 10-year federal investment of \$6.5 billion might succeed in annually producing 2.5 million fuel-cell vehicles in the United States by 2020. The report estimated the associated number of jobs at roughly 40,000. See Institute for America's Future and Center on Wisconsin Strategy, *New Energy for America*, prepared for the Apollo Alliance (Washington, DC: January 2004), p. 18.
- 414 A study by the American Council for an Energy-Efficient Economy (ACEEE) notes: "Dramatic cuts in gasoline tailpipe pollution have been achieved in recent decades through a host of combustion and exhaust after-treatment technologies largely unrelated to fuel economy improvements, and per-mile emissions of regulated pollutants have declined by a far greater factor than fuel consumption has. Some important ties between high fuel economy and low emissions remain, however. Performance of after-treatment devices deteriorates over the life of the vehicle, and as this happens, the pollution reductions achieved simply through burning less fuel become more important. Furthermore, "upstream" emissions (i.e., emissions produced during production and distribution of fuel) are directly proportional to the amount of fuel the vehicle uses, and are a large fraction of total emissions of some of the most important pollutants. For example, for a typical car today, over 40 percent of NOx emissions occur upstream." EAMA, "The Automobile Industry is the Largest Private Investor in R&D in the EU," [www.acea.be](http://www.acea.be), viewed 22 November 2007.

429 Figure II.3-1 from Feng An et al., *Passenger Vehicle Greenhouse Gas and Fuel Economy Standards: A Global Update* (Washington, DC and San Francisco, CA: International Council on Clean Transportation, 2007), p. 9.

430 Ibid., p. 8.

431 This report refers to the various ways in which fuel efficiency is expressed in different countries around the world. The United States, for instance, uses miles per gallon (mpg), European countries measure liters per 100 kilometers (l/100km), and Japan assesses kilometers per liter (km/l). The table below shows equivalent fuel economy levels expressed in these three different units:

<i>l/100km</i>	<i>km/l</i>	<i>mpg</i>
35	2.9	6.7
30	3.3	7.8
25	4.0	9.4
20	5.0	11.8
15	6.7	15.7
10	10.0	23.5
5	20.0	47.0

432 Fuel economy translated into carbon emissions per kilometer according to the New European Drive Cycle (NEDC) test. See An et al., op. cit. note 358, p. 12.

433 JAMA, *The Motor Industry of Japan 2007* (Tokyo: 2007).

434 JAMA, op. cit. note 344.

435 JAMA, "Low-Emission Vehicle Shipments 2006," 5 October 2007, at [www.jama-english.jp/statistics/low\\_emission/2006/071005.html](http://www.jama-english.jp/statistics/low_emission/2006/071005.html).

436 Number of cars sold from JAMA, "Production & Export Summary 2007," 27 April 2007, at [www.jama-english.jp/statistics/production\\_export/2007/070427.html](http://www.jama-english.jp/statistics/production_export/2007/070427.html).

437 Employment figure from JAMA, op. cit. note 36. Two key assumptions are made here: first, that labor intensities for manufacturing clean vehicles do not vary significantly from that of all other cars; second, that the proportion of Japanese-produced clean vehicles sold outside Japan is not substantially different from the breakdown in the domestic market; the underlying data used here do not cover exports. Table II.3-1 from JAMA, op. cit. note 36, and JAMA, op. cit. note 344.

438 European Commission, "Objectives of the Agreements Concluded with the Automobile Industry," [http://ec.europa.eu/environment/co2/co2\\_agreements.htm](http://ec.europa.eu/environment/co2/co2_agreements.htm), updated 19 January 2007. As it became apparent that it would not be able to meet this target, the EU moved to adopt mandatory limits of 120 grams by 2012, which environmental groups have branded as too little, too late. Constant Brand, "EU Chief Backs Rules to Force Car Makers to Cut CO2 Emissions," *Environmental News Network*, 23 January 2007; Michael P. Walsh, "EU Publishes Annual Report on CO2 Emissions from New Cars," *Car Lines*, October 2006, pp. 5–6. Carmakers continue to argue that they need additional time—at least three years—in order to meet the 120-gram limit. An EU parliamentary report in January 2008 argued in favor of adopting a 125-gram limit by 2015. Gilles Casonguay, "Automakers Hopeful for New CO2 Limit Deadline," *Reuters*, 5 March 2008.

439 European Commission, "Measures for Monitoring the Average Specific Emissions of Carbon Dioxide from New Passenger Cars," [http://ec.europa.eu/environment/co2/co2\\_monitoring.htm](http://ec.europa.eu/environment/co2/co2_monitoring.htm).

440 Table II.3-2 based on Commission of the European Communities, "Commission Staff Working Document, SEC(2006) 1078 Brussels: 24 August 2006. Accompanying document to the Communication from the Commission to the Council and the European Parliament, Implementing the Community Strategy to Reduce CO2 Emissions from Cars: Sixth Annual Communication on the Effectiveness of the Strategy," COM(2006) 463 final, pp. 22, 42, and 66, and on EAMA, "Europe Has More Than 250 Automobile Production Sites," [www.acea.be](http://www.acea.be), viewed 22 November 2007. Europe's motor vehicle producers directly employ about 2.3 million people. Passenger car production accounted for 87 percent of total output in 2006. Accordingly, the 2.3 million figure, multiplied by 0.87, yields a figure of 2 million.

441 European Federation for Transport and Environment, *Reducing CO2 Emissions from New Cars: A Study of Major Car Manufacturers' Progress in 2006* (Brussels: November 2007).

442 Japanese performance based on data in Commission of the European Communities, op. cit. note 43. This assumption needs to be seen with some caution. Vehicle models sold in one market may not be identical to the "same" model sold in other markets. "For example, different engine or transmission options may be provided in the same vehicle models for different markets," per Feng An and Amanda Sauer, "Comparison of Passenger Vehicle Fuel Economy and GHG Emission Standards Around the World" (Arlington, VA: Pew Center on Global Climate Change, December 2004), p. 29.

- 560 Locally, this has meant wrenching changes for individuals, families, and communities. The *New York Times* notes that the German city of "Dortmund, which in 1960 had 40,000 people working in steel mills, now has barely 3,000. But there are 12,000 new jobs in information technology and 2,300 in nanotechnology, which took root here in the last five years. The region, which once had no universities, now has six, as well as eight colleges, with a total enrollment of 160,000 students." ### **Part III. Outlook and Conclusions**

#### **Section 1. A Fair and Just Transition**

- 1025 European Trade Union Confederation (ETUC), *Climate Change and Employment: Impact on Employment of Climate Change and CO2 Emission Reduction Measures in the EU-25 to 2030* (Brussels: 2007). The ETUC study notes that transport offers huge potential for job creation in rail and public transport. However, climate policies pursued in Europe may lead to declines freight and passenger transport by road, as well as in the whole automobile sector.
- 1026 A recent Trades Union Conference (TUC)-sponsored study (forthcoming) on Just Transition notes, "There is disconcertingly little evidence of activity on Just Transition in most European countries." TUC Just Transition Project, Workinglives Research Institute, London Metropolitan University, unpublished draft, p. 16.
- 1027 International Labour Organization (ILO), "Decent Work For All," [www.ilo.org/global/About\\_the\\_ILO/Mainpillars/WhatisDecentWork/lang--en/index.htm](http://www.ilo.org/global/About_the_ILO/Mainpillars/WhatisDecentWork/lang--en/index.htm), viewed 5 May 2008.

- 1036 Confederation of British Industry, *Climate Change Task Force, Climate Change: Everyone's Business* (London: November 2007), p. 24.
- 1037 According to ETUC General Secretary John Monks: "A solution exists to keep employment and the planet from being the losers: an import compensation mechanism, such as a carbon tax, which would equalize carbon costs for companies outside Europe and in Europe. While allowing a considerable effort to be demanded from industry, such a system would keep heavy industry and jobs in Europe." The AFL-CIO in the United States also supports a "border mechanism enforced through a trade regime" in order "to ensure that major developing nations, such as China and India, participate" in a new global treaty on emissions reductions, per AFL-CIO, "Executive Council Statement" (San Diego: March 2008). The border adjustment proposal that has been pushed by U.S. trade unions requires U.S. importers in some circumstances to purchase emission allowances. Such a measure could be less vulnerable than a tariff to challenge in the WTO, because it could more clearly be considered an environmental measure that would qualify as an exception under GATT Article XX(g), which allows measures "relating to the conservation of exhaustible natural resources." The union-supported legislation will require negotiations with countries before the import measures were implemented.

- 1075 UNEP-SEFI, op. cit. note 1069.
- 1076 The Stern Review notes, "The available data on energy R&D expenditure show a downward trend in both the public and private sector, despite the increased prominence of energy security and climate change... In the early 1980s, energy R&D budgets were, in real terms, twice as high as now, largely in response to the oil crises of the 1970s." See Stern, op. cit. note 1068, p. 352.
- 1077 UNEP-SEFI, op. cit. note 6. However, the UNEP-SEFI report notes on page 40: "Energy efficiency investment is hard to track in its entirety. The financial benefits of energy efficiency often accrue to the end-user, representing a cost saving rather than a financial return, so a considerable proportion of energy efficiency investment is funded by energy consumers (domestic and industrial) rather than by financiers. In an industrial context, energy efficiency is normally financed internally and isn't generally identified as an investment unless it is of significant scale. So the easily identifiable investment transactions in energy efficiency only make up a small part of the real picture."
