...ICE MELT IN THE ARCTIC THREATENS POLAR BEAR SURVIVAL AND CONTRIBUTES TO RISING SEA LEVELS...

The Global Environment Outlook (GEO) process fulfills UNEP's mandate to keep the global environment under review. GEO is both a process and a series of reports, analyzing environmental change, causes, impacts and policy responses. It is an invaluable tool for researchers, policy-makers and other stakeholders.

...UNEP'S ANTARCTIC TREATY REPRESENTATIVE CHRISTIAN LAMBRECHTS INVESTIGATING THE IMPACT OF TOURISM ON THE ANTARCTIC ENVIRONMENT...

The fourth Global Environmental Outlook GEO-4 is being released in 2007. Researchers and scientists from Collaborating Centres around the world participate in the GEO process. This participatory and consultative process gives GEO assessments scientific credibility, policy relevance and authority.

## GEO

...IN THE ANTARCTIC, THREE LARGE SECTIONS OF ICE SHELVES IN THE ANTARCTIC PENINSULA HAVE COLLAPSED OVER THE PAST 11 YEARS...

The flagship Global Environmental Outlook is produced once every few years and provides up-to-date benchmark data on the state of the global environment. In addition, UNEP publishes a number of specialized GEO products, such as the Global Deserts Outlook and the Global Outlook for Ice and Snow, as well as GEO Year Books, and regional assessments.
