Ozone

Handbook on Methyl Bromide: Data reporting under the Montreal Protocol

Developed by the UNEP DTIE OzonAction Programme with input from the Ozone Secretariat, the Multilateral Fund Secretariat, National Ozone officers and Methyl bromide experts from the public and private sectors in developed and developing countries, this handbook provides the key methyl bromide data reporting information. It was developed as part of UNEP's Work Programme under the Multilateral Fund for the Implementation of the Montreal Protocol.

Montreal Protocol on Substances that Deplete the Ozone Layer.

Report of the Technology and Economic Assessment Panel April 2002, 3 Volumes. Assessment of the Funding Requirement for the Replenishment of the Multilateral Period Fund for the Period 2003-2005
 The April 2002 TEAP Report consists of three volumes: TEAP Progress Report, TEAP Replenishment Task Force Report and the TEAP Task Force on Collection, Reclamation and Storage Report, together with the TEAP Task Force on Destruction Technologies Report.

Sourcebook of Technologies for Protecting the Ozone Layer: Alternatives to Methyl Bromide

Contains critical technical descriptions of the full range of methyl bromide alternatives, data on cost and efficacy, and an outline of advantages and disadvantages of each option. Extensive tables, reference lists and annexes provide readers with the types of practical information needed for action, including names and addresses of businesses and individuals who are experts or vendors of products and services related to methyl bromide alternatives. With this information in hand, current users of the ozone-depleting methyl bromide will be able to carefully and thoroughly weigh the many options before them.

Industry Initiatives: The Montreal Protocol

This easy-to-use compact reference system provides essential resource material related to industry's response to the Montreal Protocol. The case studies included on this CD-ROM, not only show the success of the treaty, but also different companies' efforts to develop reliable alternatives to Ozone Depleting Substances (ODS). Although specifically developed to assist National Ozone Units and industry in developing countries, this CD-ROM is useful to anyone interested in the Montreal Protocol and the phase-out of ODS.

Protecting The Ozone Layer - The United Nations History

In the 1970s the world became aware of a huge danger: the destruction of the stratospheric ozone layer by CFCs escaping into the atmosphere and the damage this could do to human health and the food chain. So great was the threat that by 1987 the UN had succeeded in coordinating an international treaty to phase out emissions, which over the following 15 years has been implemented. It has been hailed as an outstanding success. This volume provides the authoritative and comprehensive history of the whole process. It is an invaluable record for all those involved and a necessary reference for future negotiations to a wide range of scholars, students and professionals.

Regulations to Control Ozone Depleting Substances: A Guide Book

A reference document designed for use by ODS officers and legal officers in Article 5 countries responsible for structuring and drafting of regulations to control and eliminate the use of ODS. It provides a brief overview of the structure and strategies in existing ODS regulations, which encompasses all governmental directives of a legally-binding nature. Also contains information about governmental guidelines, voluntary agreements and cooperation with industry, cooperation with industry associations, economic disincentives and labelling schemes.

Case Studies on Alternatives to Methyl Bromide: Technologies with Low Environmental Impact

Provides methyl bromide users with information that will assist them in selecting commercially available, low impact (i.e., environmentally

friendly) alternatives to methyl bromide. This publication is comprised of 18 case studies that illustrate non-chemical alternative techniques successfully used across the globe for major crops/commodities that use methyl bromide. The case studies provide illustrations of a range of biological and non-chemical alternatives.

Methyl Bromide Alternatives for North African and Southern European Countries

Developed in co-operation with the European Commission, GTZ and the Italian Ministry of the Environment, this publication is the proceedings of the workshop on Methyl Bromide Alternatives of North African and Southern European Countries that was held from 26-29 May 1998 in Rome, Italy. This document highlights the key conclusions and recommendations of this international workshop and provides detailed information on effective alternatives to methyl bromide appropriate for the Mediterranean region. It also includes the full paper presentations of the technical experts. The information in this publication will assist methyl bromide users, agricultural organisations and trainers in the Mediterranean region to identify and adopt effective and environmentally sustainable alternatives to methyl bromide. It will also be valuable for policy makers in developing measures and other activities needed to achieve the methyl bromide phase out.

Report of the Fourth Meeting of the Ozone Research Managers of the Parties to the Vienna Convention for the Protection of the Ozone Layer

This book contains the developments in the implementation of the Vienna Convention and its Montreal Protocol, the current status of the global ozone observing system on the monitoring of ozone and ultraviolet radiation. It contains very detailed recommendations on systematic measurements of ozone, on process studies and impacts. The publication contains the national reports of 51 countries on monitoring of ozone and ultraviolet radiation and research. The report by several countries on the implementations of the two decisions of the Fourth Conference of the Parties to the Vienna Convention is very useful. This is also available in Arabic, Chinese, French, Russian and Spanish

Action on Ozone 2000

This is the fourth edition of Action on Ozone. It details the stirring story of international cooperation to protect the ozone layer by providing a background to the ozone depletion, the discovery of the 'ozone hole' caused by miracle substances and the international efforts to protect the ozone layer through the Vienna Convention and the Montreal Protocol. The publication also provides valuable information on alternatives to ozone-depleting substances, the new challenges in the ozone protection efforts as well as the future of the ozone regime.

2002 Report of the Aerosols, Sterilants, Miscellaneous Uses and Carbon Tetrachloride Technical Options Committee (ATOCC)

In 1981, in response to the growing scientific consensus that chlorofluorocarbons (CFCs) and halons would deplete the ozone layer, the United Nations Environment Programme (UNEP) began negotiations to develop multilateral protection of the ozone layer. These negotiations resulted in the Vienna Convention for the Protection of the Ozone Layer, adopted in March 1985. The Convention provided a framework for international co-operation in research, environmental monitoring and information exchange.

2002 Report of the Refrigeration, Air Conditioning and Heat Pumps Technical Options Committee (RTOC)

In the last decade, the refrigeration, air conditioning and heat pump industry made tremendous technical progress and complied with the Montreal Protocol through phasing out CFCs and in several applications, HCFCs as well. The mobile air conditioning and the domestic refrigeration industries have shifted rapidly from CFC-12 to non-ODS refrigerants. Other applications, such as chillers and commercial refrigeration, have shifted from CFCs to HCFCs and HFCs or other fluids.
