Mainstreaming the Environment in Major Sports Events

THE GLOBAL FORUM FOR SPORT AND ENVIRONMENT

Lausanne, Switzerland

30 November and 1 December 2006

Organised by

Sponsored by

Global Forum for Sport and the Environment

The Global Forum for Sport and Environment (G-ForSE) is organized every two years by the United Nations Environment Programme (UNEP) and the Japan-based Global Sports Alliance (GSA). G-ForSE brings together international sports organizations and federations, sports clubs, sporting goods manufacturers, civil society organizations, the media and sport personalities.

G-ForSE provides a platform for sport and the environment stakeholders to review sports impact on and contribution to the environment. Specifically, the Forum provides a platform to discuss the integration of environmental issues in the development of sports facilities and equipment and the running of sports events. It also provides a platform to discuss the role of sport in promoting environmental awareness and action and to recognize and promote best practices.

G-ForSE online – www.g-forse.com – provides an extensive database of environmental activities by sport stakeholders. It enables them and the general public to share and view information on the link between sport and the environment.

2006 Global Forum Sport and the Environment (G-ForSE 2006)

G-ForSE 2006 will be held at the Olympic Museum in Lausanne, Switzerland, on 30 November and 1 December 2006. One hundred and fifty participants are expected to attend the Forum which will focus on “mainstreaming the environment in major sports events”.

G-ForSE 2006 participants will review efforts by sport organizations to mainstream the environment in their events. The participants will use experiences of recent sport events – the Helsinki 2005 IAAF World Championships, the Turin 2006 Olympic Winter Games and the 2006 FIFA World Cup – as the basis for discussions. Based on the presentations and discussions, the participants will make recommendations on how to further improve and integrate environmental considerations in major sport events.
