

# Activity 1.1

## Analyse the Nile River Basin case study

Read Case Study 1: The Nile River Basin. As you will see, this case study can be used to probe the complex, inter-related, contested, contextual and emergent nature of socio-ecological concerns.

### Activities and questions

Use the Millennium Ecosystem Assessment framework to map out the interactions between biodiversity, ecosystem services, human well-being, drivers of change and appropriate strategies and interventions.

What would sustainable development in this context require?

How can universities contribute to a better understanding of, and engagement with, the different issues?

How can universities contribute to a better understanding of the interrelationships between the different dimensions of the Nile River Basin sustainable development challenges?

*See information on the Millennium Ecosystem Assessments in Module 1. Further information can be obtained on [www.millenniumassessment.org](http://www.millenniumassessment.org)*
