

Sub-regional workshop on Better Air  
Quality in North Africa, 23-25 November  
2009.

Air Quality criteria in Libya.

**PREPARED .BY. / ENG. ABUBAKER. AL- BADAWI.  
E.G.A.**

A large, billowing plume of white smoke or steam rises from two industrial chimneys on the left side of the frame. The smoke is thick and textured, with some darker shadows within it, and it spreads out as it moves towards the right. The background is a clear, vibrant blue sky. The chimneys are dark and cylindrical, extending from the bottom left corner.

# Air Quality in North Africa (Libya)

## ***Introduction :***

**Total area of Libya is about 1775000 square km. the coast extends for 1950 kms along the southern coast of Mediterranean sea on North Africa.**

**Libya is an extensive and wide spaced country the population are distributed along and cross this vast extension, making it difficult for any planner or executive to deliver services for all.**

***Emission*** : (mobile and fixed sources)

There are many sources of air pollutants which including six common gases. (VOC, s - CO<sub>x</sub> - NO<sub>x</sub> - SO<sub>x</sub>-HC- PM).

***1- Oil sector:***

- ❖ Desert oil field Burning N.G (GOSP)
- ❖ Coast oil field refineries petrochemical complexes.
- ❖ Partially control air pollutants emissions (sensors )

## *Effects of emissions on Urban air quality:*

- ❖ **High population density in the coast region.**
  - ❖ **Most of Libyan industries are concentrated on the coast.**
- Therefore there is pollution from different sources. Affecting on people around industries regions for long run**

**This table (1) shows the pollutants resulting from burning N.G in al-Wahat area.**

<b>Pollutants</b>	<b>Avg. concentration</b>	<b>WHO</b>
PM	26.35mg/m <sup>3</sup>	265mg/m <sup>3</sup>
O <sub>3</sub>	0.045ppm	0.12ppm
CO	1.49ppm	9ppm
SO <sub>2</sub>	0.121ppm	0.14ppm
NO <sub>x</sub>	141,33ppm	130ppm
H <sub>2</sub> S	2.48ppm	.14ppm
HC	3.03ppm	0.24ppm

Source :TCEP survey 2001.

## ***2- Power stations:***

**Emissions of Electric power plants are factors in three major environmental issues:**

- ❖ **Acid rain.**
- ❖ **Urban air quality.**
- ❖ **Global climate change**

## Table (2) Comparison between H.F.O and N.G

PM/ton		HC emission/ton		NOx emission /ton		SO2 emission /ton		CO emission/ton		Fuel consumption/ton		year
H.F.O	NG	H.F.O	N.G	H.F.O	N.G	H.F.O	N.G	H.F.O	N.G	H.F.O	N.G	
2571	0.65	321.38	0.04	32633	26	491.967	0.45	1631.65	0.715	2472197.5	2236	2000

*Strategies for reducing air emissions from electric power.*

❖ **Conservation demand for electricity.**

❖ **Fuel used.**

❖ **Movement of pollutants and recipient  
(atmosphere)**

### **3- Transportation:**

- No. of motor vehicles Rose from 465000 vehicle in 1983 to 2.500.000 vehicles in 2000. Consumption fuel (Diesel /gasoline)

This table(3) shows the pollutants resulting from the Consumption of (1000 L) of fuel in motor vehicles engines.

<b>NO2 tons</b>	<b>CO tons</b>	<b>NOx tons</b>	<b>CH4 tons</b>	<b>CO2 tons</b>	<b>Transportation Sector.</b>
215	1145	2650	211	28000	1994
203	2413	7074	418	52000	1999
230	1532	2580	742	25000	2006

**source: General planning council 2007.**

## ***4- Industrial sector:***

**The most important industry in Libya is:**

- ❖ Petrochemical**
- ❖ Cement**
- ❖ Steel and iron**
- ❖ Oil refining industries.**

**Mean pollutants emissions are: HC, Sox, Cox, NOx, and PM.**

**For example: Al.Homes cement factory as (sample )**

Table(4) Produced dust from cement production factory  
AL-Homes.

Year	Production ( cement) Tons	PM Tons
2000	528.000	71.280
2001	706.900	95.430
2002	566.400	76.460
2003	360.500	48.670
2004	230.400	31.100

# ***Air pollution management system***

***Monitoring/E.G.A***

**E.G.A / Branches**

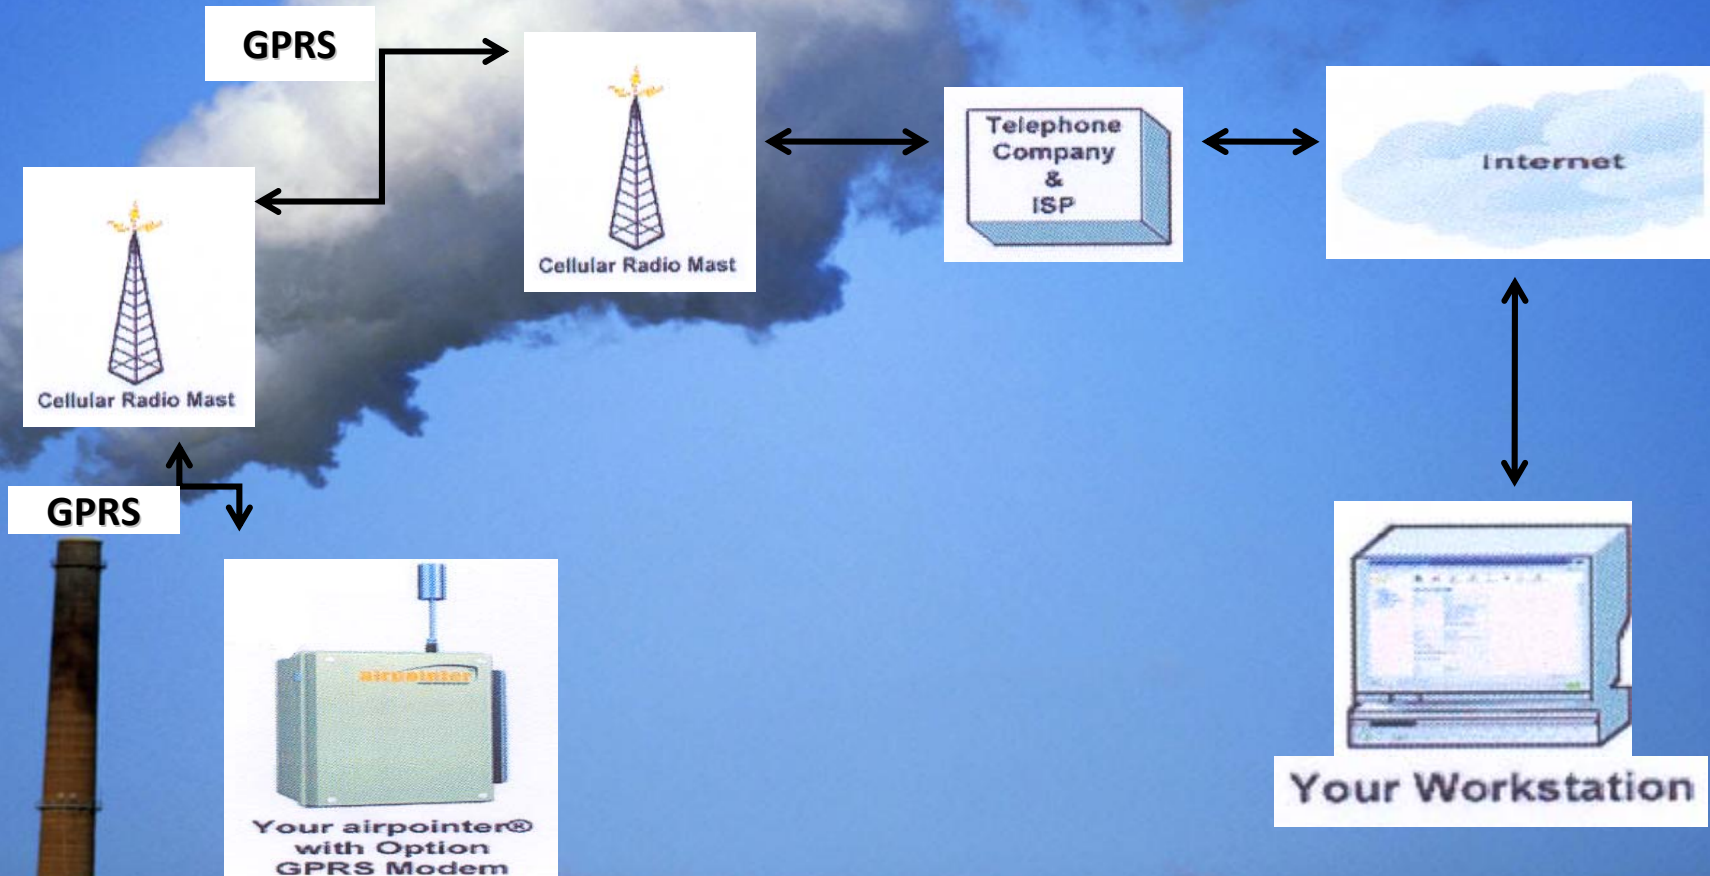

**N.O.C / OIL COMPANIES**

**N.M.C / WEATHER STATIONS**

- Cooperation between E.G.A. and N.M.C. for measurements and monitoring air pollution.

- Monitoring Net work for the whole Libyan cities. (proposal)

2: Location Sent via GSM Cellular Network (SMS/GPRS)

1: Location Defined by GPS Network

3: Location Received by Gateway Server

5: Location Information Made Available via PC or Cell Phone

4: Location Information Sent to the Internet

## ***Advantages:***

- ❖ **Single and multiple gas pollutants monitoring platform.**
- ❖ **Up to 4 sensors (SO<sub>2</sub>-NO<sub>x</sub>-O<sub>3</sub>-CO) up gradable.**
- ❖ **Meteorological measurement system available.**
- ❖ **Compact system easy to use and maintain.**
- ❖ **Low power consumption.**
- ❖ **Robust, weatherproof and inconspicuous design.**
- ❖ **No special site preparation required.**
- ❖ **Measurement results remotely available by using a web browser.**

## **Policy:**

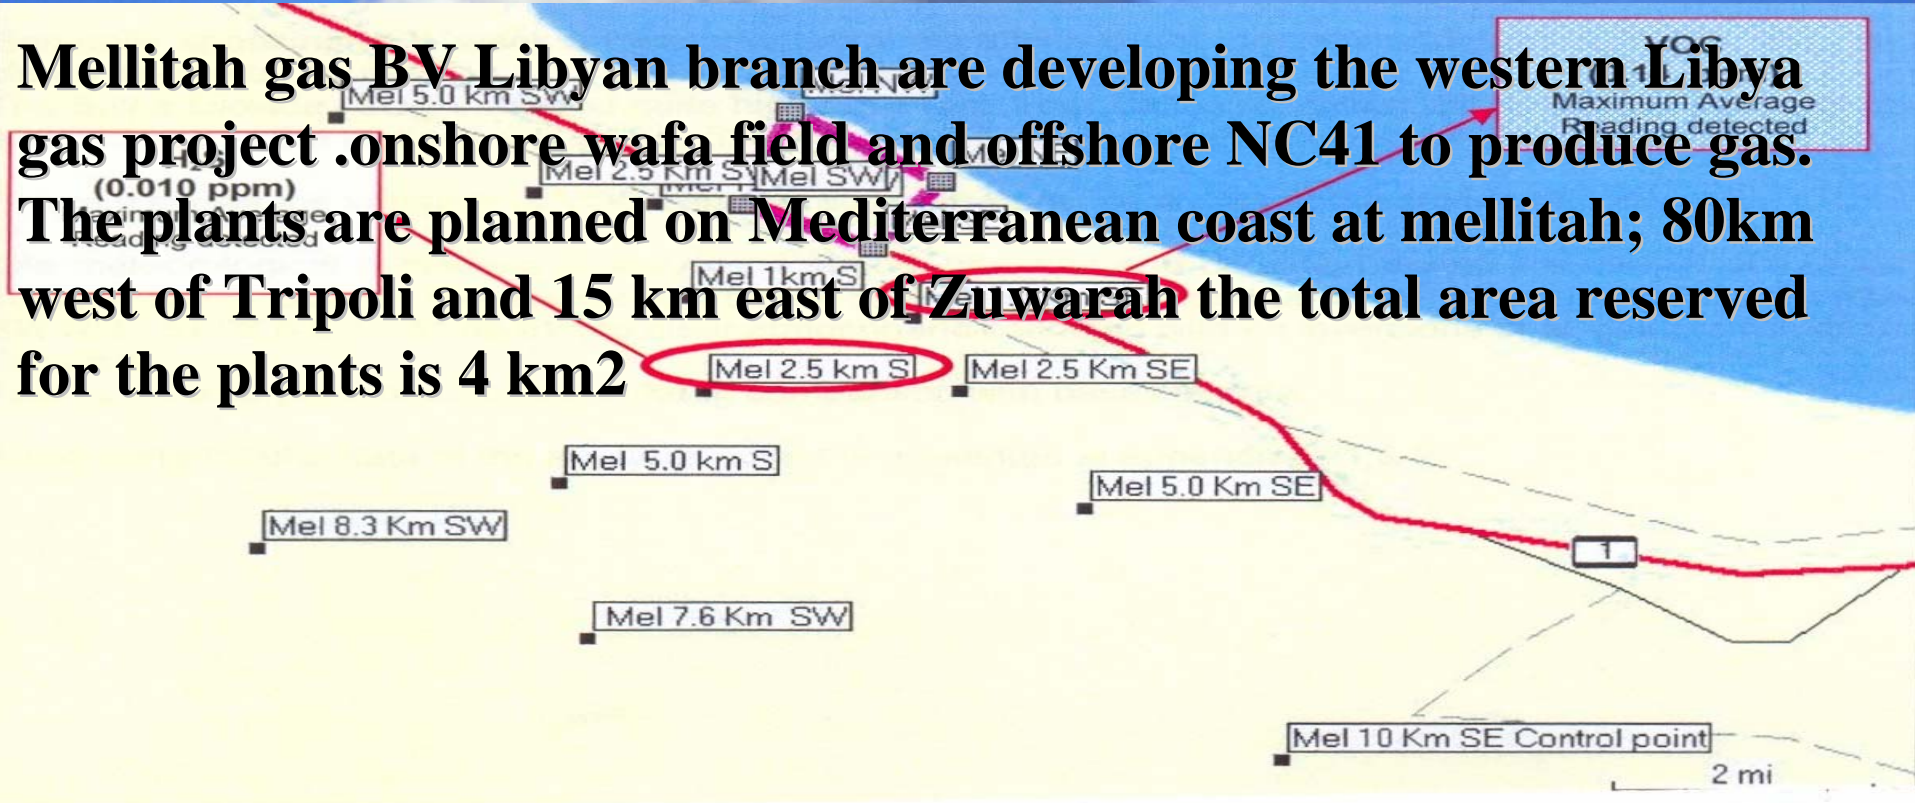

**Reduction of air pollution concerning the following steps:**

3- Develop air quality specification. Recently Issue in 2007ed by international agreements which a challenge that must be taken into consideration in future chapter indicate the importance of the pre solar energy application oil/gas pipelines (desert) red specification and standard for the purity of air.

- ❖ Law No.( 11) of 1984 concerning road traffic.
- ❖ Law No. (22) Of 1989 concerning industrial organization.
- ❖ Law No. (13) Of 1991 concerning meteorology.

# Case study

Mellitah gas BV Libyan branch are developing the western Libya gas project .onshore wafa field and offshore NC41 to produce gas. The plants are planned on Mediterranean coast at mellitah; 80km west of Tripoli and 15 km east of Zuwarah the total area reserved for the plants is 4 km<sup>2</sup>

## **Monitoring –atmospheric emissions:**

**1-1. objective of air quality monitoring - impacts on the air quality resulting from commissioning of Mellitah. coastal plants .**

**1-2. Measurements and results . H<sub>2</sub>S - VOC-No<sub>x</sub>-SO<sub>2</sub> –CO -O<sub>3</sub>**

**Table (5) Comparison of calculated max. Ground level concentration contributions and WHO air quality guidelines**

Pollutant	Hourly concentration $\mu\text{g}/\text{m}^3$		Annual concentration $\mu\text{g}/\text{m}^3$	
	Calculated	Guidelines	Calculated	Guidelines
Nox	<b>58</b>	<b>200</b>	<b>3</b>	<b>40</b>
NOx fumigation	<b>130</b>	<b>200</b>	-	-
So2	<b>27</b>	<b>125*</b>	<b>2</b>	<b>50</b>
SO2 flare	<b>2119</b>	<b>5000-10000</b>	-	-
H2S	<b>2</b>	<b>150*</b>	<b>0.2</b>	-
		<b>7**</b>		-

\* Daily 24 hours.

\*\* Applies to odour.

Figure 2 : VOC . Max. Avg. Concentrations (ppm) for the 18 weeks

Figure 3 CO Max. Avg. Concentrations (ppm) for the 18 weeks

Figure 4 : NO2 Max. Avg. Concentrations (ppb) for the 18 weeks

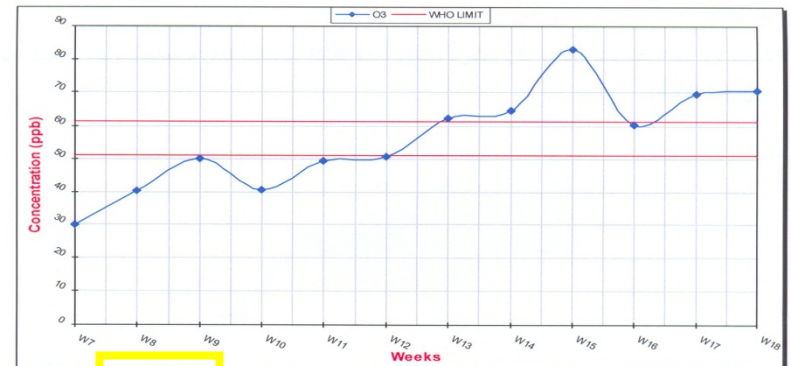

Figure 5 O3 Max. Avg. Concentrations (ppb) for the 18 weeks

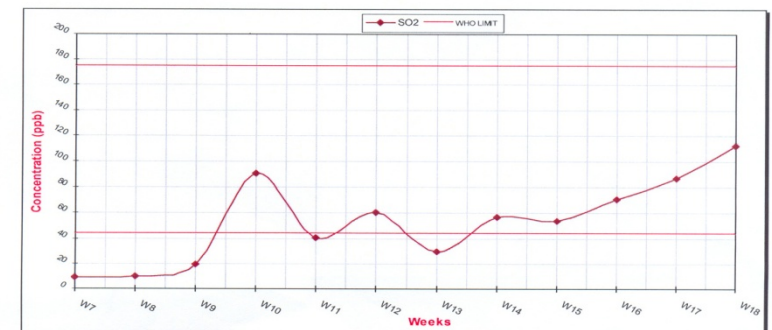

Figure 6 : SO2 Max. Avg. Concentrations (ppb) for the 18 weeks

## ***CONCLUSIONS :***

**Present environmental condition, Most environmental and atmospheric pollution sources(HC,Cox,NOx,Sox) are due to the use of petroleum derivatives resulting from oil refining for the production of oil by products used as operational energy ,is unacceptable for health or environment .Serious efforts should be made to provide constant monitoring ,measurement and control equipment ,and to use clean energy in such industries.**

*Thank you for attention*
